General Summary for Wednesday, 14 January, 2026

British Mountain Summary:

Based on forecast chart for noon 14 January, 2026

Cold westerly winds, backing southerly and strengthening ahead of a front which will move into western Scotland during the afternoon, with snow setting in for western mountains, patchier further east. Ahead of this front, scattered snow showers. Mostly dry for England and Wales until front edges precipitation into west later.

Headline for Southeastern Highlands

Mostly dry morning. Then strong southerly winds developing with snow risk later.

Detailed Forecast for Wednesday, 14 January, 2026

How windy? (On the Munros)	Westerly 30mph morning. Then backing southerly and strengthening to 40-50mph by dusk.
Effect of wind on you?	Fairly small particularly lower slopes morning. Walking then increasingly difficult and wind chill becoming significant.
How wet? (Precipitation and its impact)	Patchy snow extending east in afternoon Extensively dry morning and early afternoon. Snow then extending east, most persistent west of A9 late on, more patchy elsewhere Very little if any reaching Angus until into the night.
Cloud on the hills?	Probably remaining extensive on most or all higher areas Cloud generally widespread on higher areas, although possibly breaks to 1000m, particularly toward and east of Glenshee. Cloud base may well begin to lower again Will deteriorate in precipitation afternoon with cloud filling in across the hills, particularly west of A9.
Chance of cloud free Munros?	10%
Sunshine? Air clarity (below cloud)	Occasional sunshine, mainly toward and east of Glenshee. Cloud thickening later in day. Visibility very good or excellent but later appalling in snow..
How Cold? (at 900m)	-2C. Directly in wind will feel as cold as minus 14C.
Freezing Level	500m. Frost many glens after dawn.

Southeastern Highlands - Looking Ahead

	Thursday 15 January	Friday 16 January
How windy? (On the Munros)	Southwesterly 25 to perhaps 35mph	Low confidence in track of small potent low. May track east leaving little wind, but risk for a time, northwesterly 35 to 50mph.
Effect of wind on you?	Strong enough to make walking arduous where exposed and balance at times difficult. Considerable wind chill.	High uncertainty over track of low. May stay to the east, but risk of difficult conditions for a time with significant wind chill.
How wet? (Precipitation and its impact)	Occasional hail and snow showers Hail and snow showers mainly west of A9; few if any reaching Deeside.	Risk of a spell of heavy snow High uncertainty: Risk of a spell of heavy snow, rain below 500m, for a few hours should low track overhead. Most likely eastern areas.
Cloud on the hills?	Persistently covering higher tops Higher areas persistently covered. Cloud base typically 600 to 900m, highest cloud base Ochils and Angus.	Risk extensive for many hours Risk of extensive hill fog for several hours should widespread precipitation develop. Otherwise, would most likely be patches mainly across the tops.
Chance of cloud free Munros?	10%	30%
Sunshine? Air clarity (below cloud)	Glimpses of sunshine - most sun Ochils and Angus. Visibility excellent.	Mostly overcast. Visibility would be widely very poor should rain and snow develop.
How Cold? (at 900m)	-1C	-1C
Freezing Level	750m.	700-800m, may be down to 500-600m should persistent precipitation develop.

Planning Outlook**All mountain areas of Britain from Thursday, 15 January, 2026**

Very uncertain forecast late Thursday and into Friday, as a small scale and rather potent low pressure system edges northwards across the country on a very uncertain track. May bring a spell of strong winds and upland heavy snowfall overnight and into Friday morning before pulling away to the east. Thereafter, a drier and chilly weekend will follow. Looking further ahead, a colder continental influence may be drawn in on south to east winds, with the snow pack across the Scottish Highlands being enhanced by further spells of snowfall where fronts edge in from the west, whilst further south snow accumulates on higher areas, and occasional falls reach lower slopes.

Forecast issued at 15:58 on Tuesday, 13 January, 2026

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary.
