General Summary for Saturday, 14 February, 2026

British Mountain Summary:

Based on forecast chart for noon 14 February, 2026

A transient ridge of high pressure will bring a cold but mostly sunny day although a few snow flurries on some western hills. Nearly all terrain frozen. Toward dusk, initially near the west coast the wind will increase quickly - ahead of severe upland gales and snow overnight.

Headline for Southeastern Highlands

Terrain frozen. Light wind; extensive sun.

Detailed Forecast for Saturday, 14 February, 2026

How windy? (On the Munros) Effect of wind on you?	Northwesterly 10 or 15mph at dawn. Will drop through morning to or perhaps below 10mph in a prolonged lull. Southerly wind strengthening again toward dusk. Small or negligible but very difficult conditions quickly developing after dark.
How wet? (Precipitation and its impact)	Precipitation not expected
Cloud on the hills? Chance of cloud free Munros?	Little if any Most hills free of cloud,. Here and there, cloud persisting higher slopes and corries. 90%
Sunshine? Air clarity (below cloud)	Extensive bright sunshine before high level cloud spreads eastward afternoon. Excellent or superb visibility.
How Cold? (at 900m) Freezing Level	-4C. Terrain frozen from valleys up. Through day freezing level becoming 300 to 600m, highest sunlit slopes.

All mountain areas of Britain from Sunday, 15 February, 2026

Persistent cold most mountain areas, particularly across Scotland next week. Further snow from time to time. England and particularly Wales will have intermittently higher freezing levels resulting in freeze -thaw cycles.

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
