### General Summary for Saturday, 14 February, 2026

#### British Mountain Summary:

#### Based on forecast chart for noon 14 February, 2026

A transient ridge of high pressure will bring a cold but mostly sunny day although a few snow flurries on some western hills. Nearly all terrain frozen. Toward dusk, initially near the west coast the wind will increase quickly - ahead of severe upland gales and snow overnight.

#### Headline for Southeastern Highlands

Terrain frozen. Light wind; extensive sun.

### Detailed Forecast for Saturday, 14 February, 2026

<b>How windy? (On the Munros)</b>  <b>Effect of wind on you?</b>	Northwesterly 10 or 15mph at dawn. Will drop through morning to or perhaps below 10mph in a prolonged lull. Southerly wind strengthening again toward dusk.  <b>Small or negligible but very difficult conditions quickly developing after dark.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Precipitation not expected</b>
<b>Cloud on the hills?</b>  <b>Chance of cloud free Munros?</b>	<b>Little if any</b>  Most hills free of cloud. Here and there, cloud persisting higher slopes and corries.  <b>90%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Extensive bright sunshine before high level cloud spreads eastward afternoon. Excellent or superb visibility.
<b>How Cold? (at 900m)</b>  <b>Freezing Level</b>	-4C.  Terrain frozen from valleys up. Through day freezing level becoming 300 to 600m, highest sunlit slopes.

## Southeastern Highlands - Looking Ahead

	Sunday 15 February	Monday 16 February
<b>How windy? (On the Munros)</b>  <b>Effect of wind on you?</b>	Mostly westerly 30mph.  <b>Significant wind chill and widely arduous walking on higher areas.</b>	Northwest veering northerly 30 to 40mph, although speeds may be lower for a few hours.  <b>Considerable wind chill and walking arduous - or particularly near precipitation sometimes difficult.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Occasional hail and snow showers</b> Overnight snow clearing at dawn. In afternoon, a few hail and snow showers - most frequent west of A9.	<b>Snow showers; sometimes frequent</b> Snow and hail showers, generally well scattered, though small threat of the precipitation frequent over an hour or two.
<b>Cloud on the hills?</b>          <b>Chance of cloud free Munros?</b>	<b>Almost persistently covering higher mountains; varied cloud base.</b>  Sometimes breaking to near or above 1000m at least fleetingly, but overall extensive cloud above 750m, and sometimes forming below 600m near precipitation.  <b>20%</b>	<b>Extensive; highest cloud base toward central belt and central highlands</b>  Cloud base varying, rarely below 550m and breaks toward 1000m to 1150m.  <b>30%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Bursts of bright sunshine by mid to late morning; most sun neared east of Glenshee. Sometimes excellent visibility, but abruptly appalling in snow.	Patches of sunshine mainly toward central belt. Visibility often excellent, but very poor in precipitation.
<b>How Cold? (at 900m)</b>  <b>Freezing Level</b>	-3 rising to -1C. Will feel as close to minus 14C where exposed to the wind in morning.  Nearly all terrain frozen, albeit freezing level rising from 300m or lower at dawn erratically toward 600 to 800m.	-2C to -4C. Will feel around minus 15C directly in the wind.  850m, dropping toward 600m. Some valleys frozen or partly frozen after a frost.

## Planning Outlook

## All mountain areas of Britain from Sunday, 15 February, 2026

Persistent cold most mountain areas, particularly across Scotland next week. Further snow from time to time. England and particularly Wales will have intermittently higher freezing levels resulting in freeze-thaw cycles.

## Forecast issued at 16:48 on Friday, 13 February, 2026

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary.
