General Summary for Saturday, 7 March, 2026

British Mountain Summary:

Based on forecast chart for noon 7 March, 2026

Another dry and mostly sunny day across the Scottish mountains, but patchy cloud capping some western tops at times; strong southerly wind for northwest Highlands, gale force gusts Skye. England and Wales: Sunny for Lakes and N Pennines, but low cloud much of Wales, and capping Peak District, a little light rain.

Headline for Southeastern Highlands

Dry and sunny with the mountains cloud free, but blustery southerly wind.

Detailed Forecast for Saturday, 7 March, 2026

How windy? (On the Munros)	Southerly 20 to 30mph, locally gusty 35mph around higher mountains.
Effect of wind on you?	Blustery and at times gusty southerly winds, may impede walking at times.
How wet? (Precipitation and its impact)	Dry
Cloud on the hills?	Little or none Possible fragments around some south-facing slopes for a time, but dispersing or lifting above the hills.
Chance of cloud free Munros?	90%
Sunshine? Air clarity (below cloud)	Mostly sunny Visibility excellent.
How Cold? (at 900m)	4C, but some lower slopes colder in the morning; small change with added height.
Freezing Level	Slight frost some glens and sheltered higher areas after dawn, but lifting above freezing to the tops.

Southeastern Highlands - Looking Ahead

	Sunday 8 March	Monday 9 March
How windy? (On the Munros)	Southerly 20 to 30mph	Southwesterly 15 to 25mph, perhaps 30mph for a few hours in the morning.
Effect of wind on you?	Blustery and rather gusty at times across higher terrain.	Mostly small
How wet? (Precipitation and its impact)	Patchy rain may move in from south Patches of rain and drizzle will develop from the south.	Risk of a little light patchy rain. A little light patchy rain here and there, later in the day snow flurries tops.
Cloud on the hills?	Increasingly extensive Be prepared for extensive hill fog to develop increasingly from the south. Bases generally around 400 to 700m.	Extensive Hill fog will very likely be extensive across the hills, but some local variability where some slopes clear, perhaps between cloud layers.
Chance of cloud free Munros?	30%	20%
Sunshine? Air clarity (below cloud)	Early patchy sun, giving way to extensive cloud. Rather hazy.	Little or no sun. Visibility poor at times due to patchy precipitation.
How Cold? (at 900m)	2 to 4C, chilliest on southern hills.	4C, later down to 2C
Freezing Level	Above the summits, but slight frost some glens at dawn.	Above summits, but lowering to 1200m later in the day.

Planning Outlook**All mountain areas of Britain from Sunday, 8 March, 2026**

More cloud by Sunday as weak fronts encroach in from the west, some drizzly rain moving into mainly western parts, hazy elsewhere; dense across southern areas. Patchy rain likely in the west at least early in the new week, likely dropping back just below freezing on the Munros for a time with some snowfall on higher areas. Winds fairly light early week, then a risk of strengthening southwesterly later in the week; changeable weather conditions with spells of rain coming in from the Atlantic. Remaining old snow cover on Scottish mountains stays largely consolidated with little change, only very patchy snow remains around highest tops in England and Wales.

Forecast issued at 16:33 on Friday, 6 March, 2026

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
