General Summary for Sunday, 19 April, 2026

British Mountain Summary:
Based on forecast chart for noon 19 April, 2026

Fine conditions for many places with patchy cloud and sun. A chilly breeze will be strongest in northern Scotland. Brief showers with snow flurries on hills in northwest Scotland in the morning. Well scattered mostly light showers across Scotland and northern England into afternoon and early evening.

Headline for Southeastern Highlands

Moderate breeze, sun and broken cloud, brief showers.

Detailed Forecast for Sunday, 19 April, 2026

How windy? (On the Munros)	Northwesterly 15 to 20mph, at times 25mph higher tops particularly further east. Turning northerly, easing a little in west.
Effect of wind on you?	Fairly small effect on walking, though feeling breezy on some tops mainly east, and rather chilly in exposure higher up.
How wet? (Precipitation and its impact)	Mostly dry, isolated showers A few odd showers (snow flurries on high terrain) may drift in from the north, but most Munros dry all day. Later in day, greater risk of showers in areas near Glenshee to Lochnagar area.
Cloud on the hills?	Summits soon clear Patchy cloud forming around some higher slopes in the morning, plus local mist in some glens at first. Most cloud lifting above the summits during morning.
Chance of cloud free Munros?	90%
Sunshine? Air clarity (below cloud)	A patchwork of cloud and sun, best sun in eastern areas in morning. Excellent visibility.
How Cold? (at 900m)	0C rising to 3 or 4C afternoon, mildest around Callander. Feeling like -5 to -8C directly in the wind.
Freezing Level	900m in the morning, plus frost in many glens at dawn. Lifting above the summits.

Southeastern Highlands - Looking Ahead

	Monday 20 April	Tuesday 21 April
How windy? (On the Munros)	East or northeasterly, 20 to 25mph, occasional gustier areas.	Easterly 20 to 30mph, gusty in places around high tops and some passes.
Effect of wind on you?	Fairly small effect on walking, but in places rather blustery where exposed on high tops with considerable wind chill.	Marked wind chill in exposure, some blustery spots affecting ease of walking.
How wet? (Precipitation and its impact)	Scattered showers Showers with soft hail, also snow falling to 400-500m in morning, initially toward the east, but brief showers forming fairly widely, particularly afternoon, though some places may escape largely dry.	Precipitation rare if any Substantially dry. Chance of occasional light spots of rain, snow grains on higher slopes.
Cloud on the hills?	Varied, mostly east in morning Cloud banks most widely east of the A9 above 700-800m in the morning, more broken patches westwards, but patchy cloud likely to drift over many tops for a few hours, gradually rising and breaking higher.	Varied, then lifting above many tops Cloud banks likely to cover some slopes above 600-800m early in the day, lowest in eastern areas. Tending to lift higher up and may increasingly break up.
Chance of cloud free Munros?	50%	60%
Sunshine? Air clarity (below cloud)	Patchwork of cloud and sun, though cloudier for periods. Visibility mostly very good, briefly reduced in showers.	Fairly cloudy, some brighter sunnier moments mostly central highlands. Visibility very good.
How Cold? (at 900m)	0C rising to 3C afternoon. Where exposed to wind, feeling like -5C, to possibly nearer -10C early in day.	0C rising to 2 or 3C afternoon. Directly in the wind, feeling as cold as -10C in the morning.
Freezing Level	800-900m from dawn, plus frost in some glens. Rising just above freezing to higher tops into the afternoon.	900m early morning, rising just above freezing to highest tops afternoon.

Planning Outlook

All mountain areas of Britain from Monday, 20 April, 2026

A cool northeasterly wind into Monday brings a scattering of showers, but plenty of dry weather too. High pressure stays nearby to the north of Britain through the week ahead giving a run of dry days with sunshine typically best in the west, but many mountains often free of low cloud. A cool easterly wind prevails for England and Wales, strongest toward the south, whilst Scotland has often lighter winds. Some overnight frosts. Daytime temperatures near average, typically a few degrees above freezing on high tops through midweek. Dry, settled conditions are likely to continue into next week.

Forecast issued at 16:00 on Saturday, 18 April, 2026
