General Summary for Wednesday, 10 June, 2026

British Mountain Summary:

Based on forecast chart for noon 10 June, 2026

Showery westerlies, scattered bursts of rain moving eastward across the country, locally heavy with a chance of thunder, mainly eastern areas by afternoon. Improving to drier and brighter conditions for western England and Wales with time. Breezes tending to freshen. Feeling rather cool.

Headline for Southeastern Highlands

Showers develop, some heavy. Breeze increasing.

Detailed Forecast for Wednesday, 10 June, 2026

How windy? (On the Munros)	West to southwesterly 15 to 25mph, tending to rise, 25-30mph at times southern hills later afternoon.
Effect of wind on you?	Mostly small until afternoon, but marked wind chill where exposed to the strongest breeze, particularly later in day.
How wet? (Precipitation and its impact)	Showers forming widely, risk thunder. Mostly dry start. Then showers will move in and also develop further across the area to become widely showery in afternoon, hail and thunder, sleet tops. Later in day, heavier showers focused toward east, odd light showers west.
Cloud on the hills?	Forming on tops in rain Often clear in the morning, brief patches, but as showers develop widely, banks lower onto higher terrain above 800m and linger for a while, varied patches
Chance of cloud free Munros?	70% dropping to 40% in rain
Sunshine? Air clarity (below cloud)	Best sun early in day, before skies tend to fill in with cloud by late morning. Visibility very good, but poor in afternoon showers.
How Cold? (at 900m)	3 to 5C, chilliest in the morning. Feeling near -5C in the stronger breeze.
Freezing Level	Close to highest summits through morning, then rising further above tops.

Southeastern Highlands - Looking Ahead

	Thursday 11 June	Friday 12 June
How windy? (On the Munros) Effect of wind on you?	Southerly 20 to 25mph, later in day turning west-southwesterly risk reaching gusty 35mph higher mountains. Fairly small in places, but some more blustery and gusty areas around higher mountains. Marked wind chill.	West or southwesterly, 25 to 40mph. Strenuous walking where exposed over high terrain, some buffeting gusts starting to affect balance. Marked wind chill.
How wet? (Precipitation and its impact)	Rain most persistent west Rain soon spreading in from the southwest, lasting much of the day central highlands, where some steadier heavier falls at times, somewhat patchier in east, but periods of rain and drizzle widely.	Drizzly rain mostly west Drizzly showers merging into more frequent light rain at times western central highlands. Patchier eastwards, more often dry near and east of Glenshee.
Cloud on the hills?	Extensive Varied cloud banks early in day, but soon low cloud filling in widely, to lower elevations southern slopes, shrouding most hills above 600m with time.	Persistent west, higher east Shrouding central highlands much of the day, lowest cloud bases in Callander area, to 600m or sometimes lower. Mostly above 800m toward the A9, with higher and more broken cloud further eastwards.
Chance of cloud free Munros?	10%	20% west, to 50% east.
Sunshine? Air clarity (below cloud)	Overcast and dull, local brighter start in east, but cloudy. Visibility good if dry in east, otherwise generally poor in rain.	Largely cloudy, glimpses of sun mainly eastern areas. Visibility good below cloud in east, reduced at times in rain, more often in west.
How Cold? (at 900m) Freezing Level	3C rising to 6C. Feeling like -5C directly in wind. Above the summits.	6C rising to 8C afternoon. Feeling like -3 to -5C where exposed to wind on the Munros. Above the summits.

Planning Outlook

All mountain areas of Britain from Thursday, 11 June, 2026

Damp westerly breezes on Friday will cloak most mountains in cloud and some drizzle, better conditions eastwards. Cool and strong westerlies persist in Scotland on Saturday, then warmer with lighter winds by Sunday. Some patchy rain remaining in west and northwest Scotland over the weekend. Pressure tends to rise from the south this weekend, bringing warmer air and drier conditions to England & Wales, although west coast mountains may hold onto cloud. Into next week, a mixed southwesterly pattern remains, windy at times with periods of rain, drizzle and low cloud most persistent in the west. Warmest in England and Wales, but cooler westerly air likely returns at times mid-late week. Higher pressure then shows more signs of expanding over the country by late next week bringing improving conditions.
