## General Summary for Thursday, 25 June, 2026

### British Mountain Summary:

**Based on forecast chart for noon 25 June, 2026**

An even hotter day across the mountains; sunny and humid - risk of sunburn and dehydration. Rain soon arrives into Northwest Highlands, thunderstorms afternoon, later stretching east and south. Moderate breezes, lightest early, strengthening into evening, walking becoming strenuous over high tops.

### Headline for Southeastern Highlands

Very warm sun, some high cloud; risk late thunderstorms

## Detailed Forecast for Thursday, 25 June, 2026

<p><b>How windy? (On the Munros)</b></p> <p><b>Effect of wind on you?</b></p>	<p>Southerly between 10 and 20mph; perhaps particularly gusty at times. Trending towards the higher end of the range later in the day, with a risk of speeds approaching 30-35mph in the far east into nighttime.</p> <p><b>Generally small, although there may be sudden buffeting at times both on higher areas and some lower slopes. Late in the day, some risk of greater impacts in the far east.</b></p>
<p><b>How wet?</b> (Precipitation and its impact)</p>	<p><b>Rising risk heavy showers, thunder</b></p> <p>Morning is likely entirely dry. Through afternoon, a rising chance of rain and heavy showers, mostly towards central highlands, which could become thundery into evening/night.</p>
<p><b>Cloud on the hills?</b></p> <p><b>Chance of cloud free Munros?</b></p>	<p><b>Little if any though patches may form near rain</b></p> <p>Some early well-scattered ragged low cloud at dawn soon dissipates for cloud-free mountains. Some haar may linger east near the Angus hills. Should thunderstorms occur, some ragged fog patches reforming at varied heights.</p> <p><b>Above 90%</b></p>
<p><b>Sunshine?</b> Air clarity (below cloud)</p>	<p>Sun through high level cloud, and perhaps periods of extensively stronger sunshine. Very good visibility, a light haze towards the Central Belt.</p>
<p><b>How Cold? (at 900m)</b></p> <p><b>Freezing Level</b></p>	<p>A very warm 16 to 19C and humid; may approach 20C near Loch Ericht. Temperatures in the glens approaching the mid-20s.</p> <p>Above the summits.</p>

## Southeastern Highlands - Looking Ahead

	Friday 26 June	Saturday 27 June
<b>How windy? (On the Munros)</b> <b>Effect of wind on you?</b>	Generally east-northeasterly 10-20mph, variable and often gusty around showers. Trending southeasterly later. <b>May be often fairly small, but notable buffeting gusts around showers.</b>	Southerly, some uncertainty of peak speed, in range 35mph to possibly 50mph, at least in gusts around highest tops. <b>Expect strenuous walking conditions, more challenging in places with buffeting gusts knocking you off balance.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Thundery showers, risk prolonged later</b> A scattering of showers, heavy bursts with risk of thunderstorms too. Through afternoon, rising risk of showers clustering together into prolonged thundery downpours, greatest risk central highlands.	<b>Bursts of rain develop, risk thunder</b> High uncertainty of detail - possibly a drier window in morning, but increasing risk with time that more frequent bursts of rain develop, soonest in the west, sudden downpours, thunder and lightning.
<b>Cloud on the hills?</b>  <b>Chance of cloud free Munros?</b>	<b>Increasingly extensive through afternoon</b> Many slopes probably largely clear through morning, but patchy banks here and there around showers, locally thicker banks mostly north and east. Through afternoon, cloud increasingly fills in extensively as rain sets in.  <b>60% lowering to 20%</b>	<b>Often covering hills, some low banks</b> Fairly extensive cloud banks in the morning, possibly to many lower slopes. Some rise of base and local breaks possible for a time. In rain, lowering, filling in again, low ragged patches.  <b>20%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Patchy sun through high cloud, later more overcast. Good visibility, deteriorating as rain sets in.	Brief glimpses of sun. Misty many slopes in morning. Visibility improving for a time if dry below cloud, but poor again around rain.
<b>How Cold? (at 900m)</b>  <b>Freezing Level</b>	15 to 18C, warmest in the morning east of Glenshee. Humid.  Above the summits.	13 or 14C, small variation all day. Still rather humid. Feeling cooler directly in wind.  Above the summits.

## Planning Outlook

### All mountain areas of Britain from Friday, 26 June, 2026

Exceptionally warm and humid most mountain areas until later Friday; valley temperatures approaching the low-to-middle 30s in England and Wales, with hill temperatures approaching the mid-to-high 20s. Scotland will be slightly cooler, though temperatures will still reach the low 20s on many slopes.

A risk of extended torrential thunderstorms on Friday afternoon in northern areas. Thunderstorms may continue in the north on Saturday as well, but progressively less warm as the weekend goes: fronts begin to come in off the Atlantic, bringing a strengthening wind and bands of rain and low cloud, particularly affecting western mountains. Into next week, Atlantic westerlies will dominate with mixed weather.
