General Summary for Tuesday, 30 June, 2026

British Mountain Summary:

Based on forecast chart for noon 30 June, 2026

Rain and cloud over the hills widely, heavier pulses of rain tending to extend north and eastwards with time through middle of day into afternoon, some local thundery downpours forming. Wind dropping light across much of Highlands, fresh south-southwest winds England and Wales.

Headline for Southeastern Highlands

Frequent rain, some heavy bursts. Wind dropping light.

Detailed Forecast for Tuesday, 30 June, 2026

How windy? (On the Munros)	Southerly 15 to 20mph, up to 25mph for a time in morning, but tending to drop lighter and variable.
Effect of wind on you?	Fairly small, but feeling more blustery for a few hours on higher terrain. Sudden gusts around heavy showers.
How wet? (Precipitation and its impact)	Rain and showers, heavy bursts, risk lightning Frequent or more persistent rain mainly west in morning, then becoming areas of slow-moving showers into the afternoon, some places drier, but locally heavy bursts giving rain lasting an hour or more; risk of hail and thunder.
Cloud on the hills?	Fairly extensive Shrouding most high terrain all day, varying bases around rain, some ragged patches to lower slopes. Local breaks may form higher up, mainly east of the A9.
Chance of cloud free Munros?	30%
Sunshine? Air clarity (below cloud)	Largely cloudy, brief sun mainly east. Visibility occasionally very good if dry, but reduced in rain, poor for periods.
How Cold? (at 900m)	8C rising to 10C afternoon. Feeling near to freezing on high tops in early wind.
Freezing Level	Above the summits.

Southeastern Highlands - Looking Ahead

	Wednesday 1 July	Thursday 2 July
How windy? (On the Munros) Effect of wind on you?	Variable 10mph or less early in day, strengthening southwesterly 25-35mph, into evening 50-60mph, soonest west. Small in the morning, but becoming more blustery, walking increasingly arduous later, very difficult late in day.	Westerly, risk 70mph dawn-early morning, lessening to 40-50mph during morning, 25-35mph in afternoon, locally gusty east. Risk severe conditions from overnight and still difficult well into daytime, walking and balance challenging, slowly moderating.
How wet? (Precipitation and its impact)	Rain later in day Generally dry until later in day, except for an odd isolated shower. Toward evening, rain moving in from southwest, becoming persistent, some heavier late in day, soonest toward west.	Scattered showers Overnight rain likely clears to leave showery conditions, most frequent central highlands in morning, a scattering afternoon, may become more often dry.
Cloud on the hills?	Varied in morning, lifting, breaks to tops Banks of cloud over higher slopes and some patches to mid-levels in the morning. Tending to lift and break to upper slopes, clearing some high tops, best toward and east of Glenshee. Lowering late in day.	Lifting toward or above tops Covering high terrain fairly widely from dawn, soon mostly confined above 1000m and gradually tending to thin and break higher, best and soonest near/east of A9.
Chance of cloud free Munros?	30% rising to 70%	30% rising to 70%
Sunshine? Air clarity (below cloud)	Patchwork of cloud and sun, giving way to high cloud moving in from west later. Visibility excellent until late in day.	Occasional sun breaking through, most often eastern lower slopes. Visibility very good below cloud.
How Cold? (at 900m) Freezing Level	8 or 9C, local 10C afternoon in east. Feeling like freezing as wind increases, later near -5C in exposure on tops. Above the summits.	6C rising to 8C afternoon. Directly in the stronger winds feeling like -5 to -10C on tops. Above the summits.

Planning Outlook

All mountain areas of Britain from Wednesday, 1 July, 2026

A changeable westerly Atlantic pattern this week and into the weekend. By later Wednesday into Thursday, a spell of upland gales and more widespread rain. Risk of another windy and wetter spell into Friday. Rain and cloud most frequent over western hills from Lake District northward. Temperatures this week near or slightly below average, with marked wind chill on tops. An improving trend from the south over the weekend, best conditions for Wales and eastern hills elsewhere. Drier and warmer conditions more likely into next week, though southwesterlies may still bring more cloud to the west, some rain mainly northwest Scotland.

Forecast issued at 16:03 on Monday, 29 June, 2026
