General Summary for Sunday, 2 August, 2026

British Mountain Summary:

Based on forecast chart for noon 2 August, 2026

A temporary ridge of high pressure will bring a fine day with light wind almost everywhere. Cloud will be above nearly all summits and the air will be very clear. Nevertheless a few showers at first NW Scotland and later cloud thickening many areas ahead of rain.

Headline for Southeastern Highlands

Wind dropping through morning; intermittent sunshine.

Detailed Forecast for Sunday, 2 August, 2026

How windy? (On the Munros)	Westerly 20, perhaps 25mph after dawn. Will drop toward 10mph, probably by early afternoon.
Effect of wind on you?	Fairly small before becoming mostly negligible.
How wet? (Precipitation and its impact)	Rain very unlikely
Cloud on the hills?	More or less all clearing Patches over a few hours on some higher slopes, but by late morning, very little anywhere.
Chance of cloud free Munros?	50% gradually rising to 90%
Sunshine? Air clarity (below cloud)	Patchwork of sunshine although cloudy at times. Excellent visibility.
How Cold? (at 900m)	6C rising to 14C. Feeling close to or below freezing point directly in wind in morning.
Freezing Level	Above the summits.

Southeastern Highlands - Looking Ahead

	Monday 3 August	Tuesday 4 August
How windy? (On the Munros) Effect of wind on you?	Easterly 10mph; tending to strengthen from south toward 20 or most likely near central belt 25mph; very gusty in places. Mostly fairly small, but expect sudden gusts to develop (sometimes on lower slopes) making balance tricky.	Easterly 25 to in places a gusty 35mph; probably easing to 15mph from the south (timing uncertain). Sudden buffeting in gusty winds both higher up and on some lower slopes and valleys. Expect balance to be tricky.
How wet? (Precipitation and its impact)	Deteriorating: rain increasingly likely Low confidence - timing of changes uncertain: As cloud thickens from south, rain will spread northwards, and become widespread and constan - though rarely heavyt.	Raining most or all day Bands of rain will circulate within an area of low pressure, giving rain intermittently or frequently throughout the day.
Cloud on the hills?	Increasingly extensive in rain Most, possibly all hills cloud free morning, possibly for most of day. In rain, fog will gradually shroud higher slopes extensively, and in persistent rain extend to some or many lower slopes.	Blanket of fog across the hills Blanket of fog across higher ares, sometimes the cloud below 300m Angus and Ochils. There may be breaks to 700m, mainly west of A9.
Chance of cloud free Munros?	80% dropping to 20%	10%
Sunshine? Air clarity (below cloud)	Little or no sunshine. Excellent visibility, but dropping markedly in rain.	Sunshine unlikely. Visibility often poor.
How Cold? (at 900m)	9C	8C
Freezing Level	Above the summits.	Above the summits.

Planning Outlook

All mountain areas of Britain from Monday, 3 August, 2026

Confidence in the detail remains low through the first half of the coming week. Areas of rain (and accompanying low cloud) will circulate across Scotland - quite large falls in some areas. Although total rain fairly small across England and Wales, bursts of rain, in places thundery, will occur in some areas.

Later in the week, very little rainfall England and Wales, whilst mainly in western Scotland, some rain from time to time - though probably total rainfall small.

Terrain remains exceptionally dry, ('tinder dry') except for W Scotland.

Forecast issued at 14:07 on Saturday, 1 August, 2026
