General Summary for Sunday, 20 September, 2026

British Mountain Summary:

Based on forecast chart for noon 20 September, 2026

Gale-force winds over Scottish mountains early in the day lessen, but staying blustery and feeling chilly, for northern areas in particular. Showery rain in the west in the morning fading. Cloud base rising with good breaks forming, sunny spells best toward east. Lightest winds for Wales.

Headline for Southeastern Highlands

Early gales on tops ease, largely dry, cloud lifts.

Detailed Forecast for Sunday, 20 September, 2026

How windy? (On the Munros)	Westerly 50mph with stronger gusts early morning, tending to lessen gradually to 30-40mph by middle of day, 25mph into afternoon, slightly less by evening.
Effect of wind on you?	Challenging conditions, difficult on higher exposed slopes in morning, significant wind chill; moderating gradually but still blustery on higher areas.
How wet? (Precipitation and its impact)	Local light showers for a time Rare brief light showery rain mostly central highlands in the morning, but much of the region often dry all day. Rain and drizzle develops from west well into night.
Cloud on the hills?	Lifting and clearing many tops Patchy cloud above 800-1000m in the morning, lowest toward west. Tending to lift and break above many summits, especially in east, but some patches may come and go over higher central tops.
Chance of cloud free Munros?	60%
Sunshine? Air clarity (below cloud)	Broken cloud and sunshine; thin high cloud may move in. Visibility very good.
How Cold? (at 900m)	5 or 6C, little change all day, then tending to rise onward into night. Feeling like -5 to -8C directly in wind.
Freezing Level	Above the summits.

All mountain areas of Britain from Monday, 21 September, 2026

Warm and humid air from the southwest extends across Britain early in the new week, cloaking many hills in fog and drizzle, to lower slopes near western coasts. A band of steadier rain is likely to be draped over northwest Scotland by Tuesday. Best of cloud breaks in areas further east and northeast. Rain then passes eastwards into Wednesday followed by a few showers, lower humidity and cloud bases lifting. Later in the week, areas of low pressure toward the northwest likely still bring periods of stronger winds to Scotland at least and a risk of rain at times mainly in the west, but a trend toward higher pressure and drier weather more often for the end of September into the start of October.
