General Summary for Tuesday, 29 September, 2026

British Mountain Summary:

Based on forecast chart for noon 29 September, 2026

A windy start strengthens to widespread gales, powerful gusts not just on high terrain. Feeling chilly despite mild-to-warm temperatures, increasingly humid too. Some patchy rain and cloud moves north through Wales into England and later Scotland; northwest Scotland bright and dry well into the day.

Headline for Southeastern Highlands

Wind becomes gale-force; cloud fills in with rain developing

Detailed Forecast for Tuesday, 29 September, 2026

How windy? (On the Munros) Effect of wind on you?	Southeasterly 30-40mph to start, turbulent gusts not just over tops. Wind will soon strengthen, sustained speeds approaching 45-50mph widely, further strengthening overnight, gusting 60-70mph. Arduous walking in exposure to start, increasingly challenging, buffeting gusts at all elevations making balance difficult, later strong enough to knock you over. Significant wind chill.
How wet? (Precipitation and its impact)	A little drizzle, rain developing later A little drizzle where in cloud and spots of rain from time to time, mostly east to start and slowly spreading more widely. Rain likely to develop further into steadier falls mainly late afternoon into evening.
Cloud on the hills? Chance of cloud free Munros?	Forming increasingly Patchy cloud on southern slopes soon developing into more extensive banks across many hills near and east of the A9. Becoming blanket low cloud widely as afternoon goes, with best of any breaks on north-facing slopes toward Loch Ericht, later filling in here too. 40%, lowering to 20%
Sunshine? Air clarity (below cloud)	Any early weak sun giving way to cloudy and dull conditions, visibility becoming poor over many hills, hazy lower down.
How Cold? (at 900m) Freezing Level	6C rising to 8C afternoon, further rising to 10C into evening and increasingly humid. Rising slightly further overnight, locally 12C towards Glenmore. Feeling below freezing in direct wind. Above the summits.

All mountain areas of Britain from Wednesday, 30 September, 2026

A band of rain moves northeast through early Wednesday, leaving fresher and blustery south-southwesterlies into Wednesday and Thursday, showery in the west but often bright between showers, particularly eastern areas. Friday will be a wetter day again, the rain quite frequent with extensive cloud over western hill groups and quite windy in England and Scotland. On Saturday, higher pressure tends to expand from the south, bringing more settled weather to England and Wales; temperatures generally mild, some cool nights when skies are clear. Scotland will stay cloudier and windier, particularly in northern areas early next week, some drizzle in the northwest and occasionally broader bands of rain slipping eastward.
