General Summary for Friday, 6 November, 2026

British Mountain Summary:
Based on forecast chart for noon 6 November, 2026

Fairly light wind and scattered patches of light rain, amounting to little in total. Cloud base will vary, extensive on higher mountains, but lower down some slopes cloud free, whilst sometimes adjacent slopes remain foggy (or even between cloud layers) - with changes occurring only slowly.

Headline for Southeastern Highlands

A little rain. Extensive fog.

Detailed Forecast for Friday, 6 November, 2026

How windy? (On the Munros)	Easterly, 10 to 15mph (strongest near central belt). Will tend to ease through day.
Effect of wind on you?	**Negligible**
How wet? (Precipitation and its impact)	**Rain now and again, chiefly Angus.** Damp with pockets of rain, sometimes very light rain. The rain may be on and off most of the day manly east from about Glenshee - but total rainfall small.
Cloud on the hills?	**Extensive, particularly more eastern hills** In places Monadhliath, and extensively east and southern Cairngorms NP, areas of fog will 'hang' on lower slopes most or all day, whilst others are largely cloud free. Higher up, almost all slopes above 600 to locally 800m persistently foggy.
Chance of cloud free Munros?	**10%**
Sunshine? Air clarity (below cloud)	Cloudy or dull. The air generally very clear, though misty in rain and fog reaching some lower slopes.
How Cold? (at 900m)	3C
Freezing Level	Above the summits - frost some valleys overnight and perhaps ground frozen higher tops.

Southeastern Highlands - Looking Ahead

	Saturday 7 November	Sunday 8 November
How windy? (On the Munros)	Easterly 15 or near central belt 20 or possibly 25mph locally.	Variable 10mph or less.
Effect of wind on you?	**Fairly small**	**Negligible**
How wet? (Precipitation and its impact)	**Patches of drizzle** Areas of fine drizzle most likely near and east of Glenshee and south of Loch Tay.	**Patches of drizzle, total rainfall small** Little change with further patches of light or very light drizzle.
Cloud on the hills?	**Extensive fog, higher tops may be above the cloud.** Persistent fog most or all hills, forming from some valleys up, although the cloud top may be 1050m.	**Extensive; cloud base sometimes very different on nearby slopes** Detail uncertain: Cloud extensive or persistent above 700-900m (but possibly highest tops above the cloud). Lower down, fog clinging to many slopes from valleys up all day, whilst others are fog free or between layers of cloud.
Chance of cloud free Munros?	**40% - fog many lower slopes.**	**10%**
Sunshine? Air clarity (below cloud)	Cloudy or dull and extensively misty or foggy.	Cloudy or dull with extensive fog.
How Cold? (at 900m)	3C	3C
Freezing Level	Above the summits - but some higher terrain frozen after a frost.	Above the summits but possibly terrain on highest summits partly frozen.

Planning Outlook

All mountain areas of Britain from Saturday, 7 November, 2026

High pressure will continue to be the main influence into next week, particularly W & NW Highlands where extensively dry and wind often light. However, disappointing for other areas as 'gloomy' conditions predominate" patches of light rain and extensive low cloud and fog.
Into next week, an area of low pressure will bring rain and wind in from the southwest but northern Scotland may escape most or all the rain.

Forecast issued at 8:10 on Friday, 6 November, 2026
