General Summary for Sunday, 8 November, 2026

British Mountain Summary:
Based on forecast chart for noon 8 November, 2026

Patchy drizzle and areas of low cloud or fog, mostly east and southern Scotland, Pennines and inland across Wales, whilst western regions tend to fare better for cloud breaks and some sun. Very little wind overall. Near freezing on highest Scottish tops.

Headline for Southeastern Highlands

Mix of cloud and fog, a little dampness.

Detailed Forecast for Sunday, 8 November, 2026

How windy? (On the Munros)	Easterly 10mph or less, rarely 15mph some slopes in the morning.
Effect of wind on you?	**Negligible**
How wet? (Precipitation and its impact)	**Patchy drizzle** Local pockets of light drizzle mainly in the morning.
Cloud on the hills?	**Extensive; cloud base sometimes very different on nearby slopes** Some local variations, but cloud extensive or persistent above 700-900m (some higher slopes may poke out above fog or between banks). Lower down, fog clinging to some slopes all day, whilst others are fog free. May thin a little during the day.
Chance of cloud free Munros?	**10%**
Sunshine? Air clarity (below cloud)	Cloudy or dull with extensive fog. Some brighter moments develop with time, but sun rare.
How Cold? (at 900m)	3C
Freezing Level	Just above freezing on the highest summits but some terrain on high tops partly frozen.

Southeastern Highlands - Looking Ahead

	Monday 9 November	Tuesday 10 November
How windy? (On the Munros)	Easterly or variable 10mph or less.	South-southeasterly 10 to 20mph, strongest on tops in Callander area.
Effect of wind on you?	**Negligible**	**Mostly small.**
How wet? (Precipitation and its impact)	**No rain expected** Locally feeling damp where in fog.	**Rain not expected**
Cloud on the hills?	**Varied fog and low cloud** Areas of cloud likely at different heights, plus fog in glens, more extensive low fog toward the lowlands. Some slopes between fog layers and higher tops may emerge above all cloud.	**Areas of fog, high tops may be clear** Various cloud banks, including some fog on lowest terrain. A deck of cloud may drift around many hills, but higher slopes may remain above much of the cloud / fog.
Chance of cloud free Munros?	**50% (above fog in places)**	**50% (above fog on tops)**
Sunshine? Air clarity (below cloud)	Little if any sun many lower areas where generally hazy, or foggy, but higher up may be sunny in clear air.	Sunshine and hazy high cloud. Visibility excellent, but lower down near the central belt may be foggy or hazy at least.
How Cold? (at 900m)	1C.	1 or 2C.
Freezing Level	Near or just below freezing from 1000m upward all day; plus frost in glens early morning.	Close to freezing on tops above 1000m all day and possibly frost widely in the glens early morning.

Planning Outlook

All mountain areas of Britain from Monday, 9 November, 2026

A slack pressure pattern to start the new week over Scotland, maintaining varied low cloud and fog. Lowering pressure to the south and an increasing easterly wind for England & Wales. Rain pushes into Wales on Tuesday, reaching the south Pennines with time, persisting in these areas into Wednesday, but very little extending further northwards. Into the second half of the week, a switch to a colder northerly flow will likely drop the freezing level to 800m increasingly widely for Thursday-Friday, plus frost on low ground. Some snow showers on northern Scottish mountains, but largely dry weather elsewhere. During next weekend, a shift to a less cold Atlantic influence - a changeable mix likely into the following week.

Forecast issued at 15:00 on Saturday, 7 November, 2026
