General Summary for Wednesday, 11 November, 2026

British Mountain Summary:
Based on forecast chart for noon 11 November, 2026

Many places stay dry all day with sunshine and broken cloud. Below freezing on Scottish tops. A band of rain and hill snow moves into northern Scotland during the day, plus a strengthening northwesterly wind. Easterly winds for Wales, light rain in the south fizzles out, but leaves low cloud and dampness.

Headline for Southeastern Highlands

Dry with sun; chilly breeze increases.

Detailed Forecast for Wednesday, 11 November, 2026

How windy? (On the Munros)	Northerly 10mph or less in morning, rising during the daytime, to 20mph later 25mph toward dusk. Strengthening toward 40mph into night, locally risk 50mph high eastern tops.
Effect of wind on you?	**Fairly small, but becoming more noticeable later and distinctly chilly over high terrain.** **Deteriorating into night, becoming gales locally eastern mountains.**
How wet? (Precipitation and its impact)	**Dry until late, then some snow showers** Dry most likely until after sunset, then some showery snow increasingly to 700m, moving in from the north, fading to just isolated brief snow showers during evening.
Cloud on the hills?	**Occasional patches** Many mountains often free of cloud. Some patches may drift around higher slopes from time to time.
Chance of cloud free Munros?	**80%**
Sunshine? Air clarity (below cloud)	Mostly sunny, a little patchy cloud. Visibility excellent.
How Cold? (at 900m)	0 or +1C, dropping to -2C into evening. Feeling like -5C as wind increases.
Freezing Level	900-1050m, tending to lower slightly during day. Also frost many glens in morning.

Southeastern Highlands - Looking Ahead

	Thursday 12 November	Friday 13 November
How windy? (On the Munros)	Northerly 30 to 45mph, strongest higher eastern mountains, particularly morning.	Northwesterly, turning westerly by later in day, 20 to 25mph, at times may reach 30mph eastern tops early in day.
Effect of wind on you?	**Strenuous walking high terrain, more arduous eastern tops, frequent buffeting. Significant wind chill; severe east tops.**	**Fairly small, but on some exposed tops may start to affect ease of walking, with marked wind chill.**
How wet? (Precipitation and its impact)	**Rare flurries** A few brief snow showers mostly areas toward Lochnagar, but much of the region substantially dry.	**Substantially dry** Chance of an odd local snow flurry, but most of the day likely stays dry.
Cloud on the hills?	**Mostly little** Occasional patches may drift in from the north to cap higher slopes from time to time, but most tops toward the south often clear all day.	**Mostly very little** Local patches may drift onto some upper slopes, greater risk toward the central highlands in the afternoon.
Chance of cloud free Munros?	**80%**	**80%**
Sunshine? Air clarity (below cloud)	Mostly sunny. Visibility excellent.	Occasional sunshine, best toward the lowlands. Visibility excellent.
How Cold? (at 900m)	-1 or -2C. Feeling like -12 to -17C directly in the wind, coldest toward east.	-2C rising to around 0C. Wind chill feeling like -10C.
Freezing Level	700-800m. Frost widely in glens in morning, all day out of sunlight.	Much terrain frozen from dawn with frost all day in some glens out of sunlight; variable slow rise toward 900m during day.

Planning Outlook

All mountain areas of Britain from Thursday, 12 November, 2026

Chillier in the second half of this week with frost widely, but much clearer conditions for all with sunshine. Into the weekend, as the wind shifts west then southwesterly, less cold air drifts in from the Atlantic bringing more cloud onto western hills - some rain mainly in western Scotland, whilst England and Wales may remain largely dry for the weekend. A changeable outlook into next week with varying temperatures, stronger wind at times, rain and some upland snow possible. Unsettled patterns are more likely to prevail beyond mid-month.

Forecast issued at 15:25 on Tuesday, 10 November, 2026
