General Summary for Friday, 13 November, 2026

British Mountain Summary:
Based on forecast chart for noon 13 November, 2026

Under high pressure most mountain areas fine with sunshine. However, progressively north across Scotland, increasing strong westerly wind will bring snow showers to mainly the NW Highlands and low cloud across western mountains. Much terrain frozen - but freezing level rising through day.

Headline for Southeastern Highlands

Terrain widely frozen. Wind strengthening toward gale.

Detailed Forecast for Friday, 13 November, 2026

How windy? (On the Munros)	Westerly, progressively strengthening from 20mph post dawn to 25-35mph before dusk, when the strongest winds will be near Ben Alder.
Effect of wind on you?	**Fairly small, before on exposed tops , the wind increasingly affect ease of walking, with marked wind chill.**
How wet? (Precipitation and its impact)	**Risk snow flurries, probably only west of A9** One or two snow flurries may reach central highlands.
Cloud on the hills?	**Generally confined to, or above higher areas. Higher cloud base toward east.** Cloud base will be progressively higher and more broken eastwards. Central highlands: cloud base typically 700 to 900m, some breaks above. Elsewhere: most cloud above 1050m.
Chance of cloud free Munros?	**70%**
Sunshine? Air clarity (below cloud)	Patchy sun central highlands to often sunny toward and east of Glenshee. Visibility excellent.
How Cold? (at 900m)	-2C; rising marginally through day. Will feel as cold as minus 8C where exposed.
Freezing Level	Terrain nearly all frozen morning, but slowly a definite freezing level will develop around 750m.

Southeastern Highlands - Looking Ahead

	Saturday 14 November	Sunday 15 November
How windy? (On the Munros)	West or southwesterly between 30 and 40mph.	Very low confidence near centres of low pressure: Varied direction, possible marked lull but anticipate up to 40mph.
Effect of wind on you?	**Increasing buffeting and wind chill becoming considerable with increasing height. Expect balance sometimes to be difficult.**	**Sometimes small, but zones where wind chill significant and walking difficult - these challenging conditions could set in abruptly.**
How wet? (Precipitation and its impact)	**Rain or snow now and again** Occasional now and again (rain lowest slopes, later below 600 or 700m). Total rainfall small and areas south of about Loch Tay and near and east of Glenshee largely dry.	**Periods of rain, perhaps snow** Areas of rain will circulate within general low pressure, perhaps falling as snow on higher tops - possibly abruptly much lower late in day.
Cloud on the hills?	**Most higher mountains foggy. Cloud base highest toward Glenshee.** Cloud base typically 650 to 900m. Toward and east of Glenshee and Ochlls, cloud base mostly above the summits.	**Fog very likely across the mountains all day** Fog in some areas from lower slopes up, and few breaks above 600m.
Chance of cloud free Munros?	**20%**	**10%**
Sunshine? Air clarity (below cloud)	Sunshine now and again, perhaps sunshine extensive for periods toward central belt and near and east of Glenshee. Mostly good visibility but poor in	Sunshine not expected. Regions of very poor appalling visibility.
How Cold? (at 900m)	-2C. Will feel as cold as minus 13C directly in the wind.	1 to 3C, may abruptly drop to -2C
Freezing Level	Most terrain initially frozen; thawing starting lower slopes as freezing level rises toward 800m, perhaps 1000m near central	Above the summits,. But threat abrupt change to freezing level of 550m.

Planning Outlook

All mountain areas of Britain from Saturday, 14 November, 2026

Pressure will fall over the weekend: a little rain for some western mountains on Saturday, but more widespread rain (snow higher areas Scottish Highlands) on Sunday - albeit the detail for Sunday is unusually uncertain (for a 3 day forecast). Cold often dry conditions will return on Monday, but beyond extensive rain (sometimes snow higher areas) and strong winds probable, although presently Scotland, particularly the Highlands may have only snow showers in the cold air.

Forecast issued at 7:39 on Friday, 13 November, 2026
