General Summary for Wednesday, 18 November, 2026

British Mountain Summary:
Based on forecast chart for noon 18 November, 2026

Strong easterly winds bring significant chill factor to Scottish mountains; some snow flurries mostly eastern areas. A slow-moving area of patchy rain and some hill snow for southern Scotland and northern England. Southwesterly winds for Wales, showery bursts with hail in the west and south.

Headline for Southeastern Highlands

Brisk winds, snow flurries east, drier west; cloud on many tops.

Detailed Forecast for Wednesday, 18 November, 2026

How windy? (On the Munros)	Easterly 25 to 30mph, in places gusty 35mph around higher tops, particularly central highlands.
Effect of wind on you?	**Starting to affect ease of walking over exposed terrain, some more buffeting gusts in places. Considerable wind chill.**
How wet? (Precipitation and its impact)	**Snow flurries** Light snow may fall frequently across the region; sleet or rain lower slopes below 600-700m. Patchier toward west and intermittently dry for an hour or more.
Cloud on the hills?	**Fairly extensive higher areas** Shrouding most high terrain all day, some banks to lower levels in east. Local breaks may emerge toward central highlands, rarely above tops.
Chance of cloud free Munros?	**20%**
Sunshine? Air clarity (below cloud)	Little or no sun, a veil of high cloud at best. Visibility good where dry, but often reduced, very poor at times if in snow.
How Cold? (at 900m)	-1C. Feeling near -10C in the wind.
Freezing Level	800m.

Southeastern Highlands - Looking Ahead

	Thursday 19 November	Friday 20 November
How windy? (On the Munros)	East-northeasterly 20 to 30mph.	Northeasterly then variable, 10-15mph or less, perhaps starting at 15-20mph some easternmost hills.
Effect of wind on you?	**Starting to affect ease of walking on some high terrain. Considerable wind chill.**	**Mostly small.**
How wet? (Precipitation and its impact)	**Odd snow showers east** Rare snow flurries mostly areas from Lochnagar to Angus glens.	**Precipitation rare if any** Chance of an isolated brief snow flurry, mostly easternmost hills, but most places stay dry all day.
Cloud on the hills?	**Mostly very little** Patchy cloud drifting onto some higher slopes mostly in eastern areas, whilst central tops are often clear.	**Occasional patches, mostly east** Patches of cloud around some slopes, more likely in eastern areas in the morning, some may come and go into the afternoon, but many mountains likely often clear.
Chance of cloud free Munros?	**80%**	**70%**
Sunshine? Air clarity (below cloud)	Intermittent sun, more often sunnier west of the A9. Visibility very good.	Frequently sunny central highlands, some patchy cloud eastern areas. Visibility excellent.
How Cold? (at 900m)	-1 or -2C. Feeling like -10C directly in the wind.	-1C.
Freezing Level	700m, rising marginally in middle of day. Frost in many glens in morning.	700-800m, may rise slightly higher near the central lowlands. Frost in many glens in the morning.

Planning Outlook

All mountain areas of Britain from Thursday, 19 November, 2026

Staying below freezing over Scottish mountains late this week, varying around freezing for northern England, more often milder for Wales. Frost common into valleys and glens. Snow flurries mainly eastern and far northern Highlands, otherwise many places dry to end the week, winds dropping light Friday-Saturday. Southeasterly winds likely increase during the weekend, a risk of rain moving into Wales by Sunday, but elsewhere may well remain dry.
Into next week, uncertainty about the progress of Atlantic weather systems, which may pivot toward the south again, maintaining chilly easterly winds for Scotland at least, with further rain and hill snow possible, but there may be little precipitation west and particularly northwestern Highlands.
