General Summary for Sunday, 22 November, 2026

British Mountain Summary:
Based on forecast chart for noon 22 November, 2026

Windy across upland Britain, gales some higher areas, particularly Snowdonia. Extensively dry and cold and much terrain will be at least partially frozen. However, cloud progressively thicker southward across Wales, with an almost stationary area of rain South Wales.

Headline for Southeastern Highlands

Upland wind near gale. Fine; occasional sunshine.

Detailed Forecast for Sunday, 22 November, 2026

How windy? (On the Munros)	Easterly 30 to locally 40mph, locally very gusty, sometimes on lower slopes. Very gusty in places, sudden gusts penetrating to some lower slopes and valleys.
Effect of wind on you?	**Considerable wind chill and sometimes abruptly gusty winds will make walking and particularly balance difficult; sometimes on lower slopes.**
How wet? (Precipitation and its impact)	**Little or no precipitation** Isolated very light showers, giving snow flurries.
Cloud on the hills?	**Little if any** Risk cloud forming on some higher areas - at this stage extent uncertain Cloud base 750-900m.
Chance of cloud free Munros?	**50%**
Sunshine? Air clarity (below cloud)	Sunshine coming through between large banks of cloud. Visibility excellent.
How Cold? (at 900m)	-1C or 0C. Will feel as cold as minus 8C directly in the wind.
Freezing Level	850m. After a frost, terrain largely frozen lower slopes, particularly those out of the sun.

Southeastern Highlands - Looking Ahead

	Monday 23 November	Tuesday 24 November
How windy? (On the Munros)	Southeasterly 20mph, perhaps 15mph Angus and Ochils.	South to southeasterly, strengthening quickly with height a very gusty 40-55mph. Ferocious gusts; some reaching valleys.
Effect of wind on you?	**Fairly small.**	**Severe wind chill and very difficult walking where exposed. Gusts may well knock you over - even on some lower slopes.**
How wet? (Precipitation and its impact)	**Precipitation not expected**	**Persistent snow spreading east** Persistent snow will gradually extend east although timing uncertain. In particularly, little, perhaps no precipitation at all during daylight near and east of Glenshee. Rain lowest slopes, risk whiteout higher up.
Cloud on the hills?	**May shroud many higher areas** Banks of cloud, base 700 to 900m, may be extensive.	**Very extensive and low** At first cloud may be confined to higher slopes. In precipitation, cloud base will drop, widely to or below 500m.
Chance of cloud free Munros?	**40%**	**10%**
Sunshine? Air clarity (below cloud)	Patchy sunshine and very good visibility.	Dull and misty with visibility very poor or appalling in precipitationd.
How Cold? (at 900m)	-1C Will feel as cold as minus 6C in the wind.	-2C. Will feel as cold as minus 15C in the wind.
Freezing Level	800m. Lower areas partly frozen after a frost sheltered valleys.	Varying between 450 to 700m.

Planning Outlook

All mountain areas of Britain from Monday, 23 November, 2026

Colder than normal most mountain areas throughout next week. Precipitation and temporarily warmer conditions will occasionally penetrate across most southern and western mountains, but particularly later in the week, freezing level across Britain may drop to a few hundred metres - with much higher terrain persistently frozen. Most considerable snowfall is likely over the SE Highlands and perhaps Scottish Border hills.

Forecast issued at 12:20 on Saturday, 21 November, 2026
