General Summary for Sunday, 1 June, 2025

British Mountain Summary:

Based on forecast chart for noon 1 June, 2025

Low pressure brings a cold and blustery westerly airflow. Area of rain southern Highlands southwards, will clear in morning, brighter conditions following. Showers transferring inland from west coast, concentrated NW Highlands and later NE Scotland, where risk of thunder. Turning mostly dry later in the day for England and Wales.

Headline for Southern Uplands

Early rain, then lull, before scattered showers return. Very blustery and chilly.

Detailed Forecast for Sunday, 1 June, 2025

How windy? (On the summits)	Southwesterly veering westerly in the range 25-40mph. Possibly dropping to 20-30mph for a time.
Effect of wind on you?	Feeling very blustery and cold on high ground and in passes where wind is squeezed. Will affect your balance. Significant wind chill.
How wet? (Precipitation and its impact)	Early heavy rain, then scattered showers. Area of persistent heavy rain and drizzle at first, quickly clearing east in morning. A drier slot will follow for a few hours, bar some coastal drizzle, before scattered heavier showers return from west afternoon.
Cloud on the hills? Chance of cloud free summits?	Extensive at first, breaks developing Widespread cloud from lower slopes up morning, particularly Galloway, although most cloud above 450-600m Borders. Will tend to rise and break toward and into the afternoon towards or above tops. Patches reforming tops in showers as they return. 10% rising to 60% by midday.
Sunshine? Air clarity (below cloud)	Patchy sunshine, especially afternoon. Good visibility, away from early rain, and air-mass scattered showers that develop.
How Cold? (at 750m) Freezing Level	7C. Feeling below freezing in the wind. Above the summits.

All mountain areas of Britain from Monday, 2 June, 2025

Atlantic low pressure systems will continue to dominate and bring a sustained period of westerly winds for the next 7 to 10 days. High rainfall western mountains, with periods of strong to gale force westerly winds bringing significant chill factor. Best of the drier and brighter weather for eastern ranges. Freezing level at times down to 1200-1400m in Scotland, bringing occasional snow to the highest Munro tops.
