General Summary for Sunday, 9 November, 2025

British Mountain Summary:

Based on forecast chart for noon 9 November, 2025

A swathe of rain advances eastwards across all regions during the day, heaviest over south-facing hill groups, patchier northwards across the Highlands, breaking up with time in the west, leaving a few showers, rising cloud bases. Windy, up to gale force high tops, most sustained in Wales.

Headline for Southern Uplands

Strongest winds easing afternoon. Widely wet with low cloud.

Detailed Forecast for Sunday, 9 November, 2025

How windy? (On the summits)	South-southwesterly 30-35mph. Strongest winds west reaching up to a gusty 45mph in morning (not just on tops). Speeds tending to lower in afternoon from west to 25mph.
Effect of wind on you?	Strenuous-to-arduous walking with considerable buffeting and wind chill. Improving a little through afternoon.
How wet? (Precipitation and its impact)	Rain sets in widely from west From dawn, drizzly rain soon setting in for heavier persistent rain from the west, lasting onward through middle of day. Dry east at first, then also gradually setting in here. Rain starting to fade from Galloway in afternoon. Some further rain develops from south into night.
Cloud on the hills?	Extensive west, spreading east An extensive layer of cloud covers high terrain of Galloway and the Borders most of the day, some bases to middle or lower slopes near the Solway. Higher bases toward Borders/Lothians at first, before more widely extensive in rain.
Chance of cloud free summits?	60% east at first, lowering to 10% widely
Sunshine? Air clarity (below cloud)	Largely overcast. Poor visibility west, starting good in the east at first through turning poor here too.
How Cold? (at 750m)	6 to 8C, coolest in Galloway, tending to lower a little during day from west. Feeling like -3 to -5C in direct wind.
Freezing Level	Above the summits

All mountain areas of Britain from Monday, 10 November, 2025

A cloudy and wet week ahead as several low pressure cores draw frontal systems across the British Isles. Rain at times extensive and heavy, streams in spate with a risk of flooding, primarily western mountains. Winds start fairly light but soon increase with gales becoming widespread by Tuesday, which may persist for several days. Temperatures remain mild until later in the week when cold air begins pushing into northern Scotland - timing and extent of the arrival of cold air remains uncertain but high terrain of Scotland and possibly northern England may start to see more snow around or after next weekend.

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
