## General Summary for Saturday, 6 December, 2025

### British Mountain Summary:

**Based on forecast chart for noon 6 December, 2025**

Wind dropping light across much of the inland Highlands, but gusty near west coasts and staying strong for longer in the far north. Low cloud fairly widespread with patchy rain, clearer toward northwest. Southwesterly winds England, gale-force in Wales, driving in frequent heavy showery rain.

### Headline for Southern Uplands

A little rain, local showers; low cloud. Locally gusty Cheviots.

## Detailed Forecast for Saturday, 6 December, 2025

<b>How windy? (On the summits)</b>  <b>Effect of wind on you?</b>	Variable south to southeast 10 to 20mph, but near the Solway turning southwesterly and may increase a little. Gusty speeds more common toward Cheviots 15-25mph, strongest later in day. <b>Mostly small, local gusty areas mainly toward south.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Rain and drizzle, some showers</b> Generally damp all day where in cloud, periods of rain likely on and off at least. Some showery rain at times mostly near Solway Firth, may drift inland afternoon. Wet underfoot, streams in spate especially in west following previous rain.
<b>Cloud on the hills?</b>  <b>Chance of cloud free summits?</b>	<b>Extensive low cloud</b> Blanketing most hills all day, fairly extensive from mid-slopes upward, some varied banks of cloud to lower slopes. Some breaks may emerge toward the north.  <b>10%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Sun unlikely, generally misty and dull. Local improvements mainly north.
<b>How Cold? (at 750m)</b>  <b>Freezing Level</b>	4C. Feeling sub-zero if exposed to stronger winds on hills.  Above the summits.

**All mountain areas of Britain from Sunday, 7 December, 2025**

Generally unsettled onward into next week with areas of low pressure moving in from the Atlantic on prevailing southwesterly winds. Temperatures often relatively mild, typically only higher tops in the Highlands intermittently just below freezing point, expect periods of thawing even up to these tops. Day-to-day weather detail will be uncertain even in short-range as complex systems develop - a series of frontal systems bringing spells of rain - any snowfall mostly confined to highest tops in Scotland; also showers at times with hail mostly near western coasts. Wind speeds will also vary, for periods reaching gale force on tops, but intermittent lulls.

**Forecast issued at 16:03 on Friday, 5 December, 2025**
