General Summary for Saturday, 6 June, 2026

British Mountain Summary:

Based on forecast chart for noon 6 June, 2026

Patchy rain toward the south of the Highlands, and tends to become more persistent west coasts. Varied low cloud, higher breaks generally north. A swathe of rain and low cloud northern England and southern Scotland. Clusters of showery rain for Wales, heavy bursts with local thunder. Wind speeds varying.

Headline for Southern Uplands

Breezy start, easing. Rain, drizzle, low cloud.

Detailed Forecast for Saturday, 6 June, 2026

<p>How windy? (On the summits)</p> <p>Effect of wind on you?</p>	<p>Southeasterly 25 to 30mph early morning, strongest toward east, easing into afternoon to 15mph or less. Turning southerly toward evening, starting to increase, then southwesterly 25-35mph into night, soonest in west.</p> <p>Blustery early in day, feeling cool and may affect comfortable walking on tops for a time, but lessening to then become fairly small until late evening.</p>
<p>How wet? (Precipitation and its impact)</p>	<p>Rain and drizzle on and off</p> <p>Rain and drizzle frequent and fairly widely much of the day, some steadier pulses of rain particularly southern hills. Breaking up a little to be patchy afternoon, locally drier for periods in north, but risk showery rain moving back in from south later.</p>
<p>Cloud on the hills?</p> <p>Chance of cloud free summits?</p>	<p>Becoming fairly extensive, lowest south</p> <p>Cloud banks covering hills near Solway already from around dawn, whilst more north and eastern hills start clearer. Cloud lowering more widely, filling in to lower elevations southwest areas. Some breaks northward when dry.</p> <p>Starting 60% north/east, lowering to 20% widely</p>
<p>Sunshine? Air clarity (below cloud)</p>	<p>Sun weak at best through high cloud early in day in east, becoming widely overcast. Visibility very good where dry, but reducing in rain, risk becoming poor in west.</p>
<p>How Cold? (at 750m)</p> <p>Freezing Level</p>	<p>6C rising to 8 or 9C afternoon. Feeling near/below freezing in the wind.</p> <p>Above the summits.</p>

Southern Uplands - Looking Ahead

	Sunday 7 June	Monday 8 June
How windy? (On the summits) Effect of wind on you?	Southwesterly 30-40mph, likely near the higher speeds for several afternoon hours, risk gusting 50mph. Strenuous or arduous walking most or all day, significant wind chill. Highest speeds may knock you off balance.	Southwesterly 20 to 25mph. Fairly small effect on walking, but feeling blustery and a noticeable chill on exposed high terrain.
How wet? (Precipitation and its impact)	Patchy rain, setting in from west afternoon Patches of rain will drift from the southwest throughout the day, falls amounting to little through morning. From midday, falls increasingly frequent, may set in near and west of M74.	Showery rain A band of rain clears eastward around dawn, heavy briefly Cheviots. Then broadly showery, bursts of rain passing west to east, risk isolated thunder, later particularly eastern areas.
Cloud on the hills?	May be fairly extensive west Most hills in cloud above 500-600m at dawn, a lifting trend with some breaks to summits east of M74. Cloud may briefly lift in the west too, but then lowers again, towards middle or lower slopes through afternoon.	Breaks to tops Varied patchy cloud over the hills, lowest most often near Solway, but good breaks to upper slopes further north and eastward.
Chance of cloud free summits?	60% east, 30% west	50%
Sunshine? Air clarity (below cloud)	Sunshine increasingly weakened by high cloud, may stay largely cloudy west. Good visibility but a haze to the west.	Brief bursts of sun. Visibility good away from showers and below cloud.
How Cold? (at 750m) Freezing Level	8 to 10C, coolest southern Galloway slopes east to Moffat hills. Feeling below freezing in strongest wind. Above the summits.	5 to 7C, mildest east. Feeling below freezing directly in the wind. Above the summits.

Planning Outlook**All mountain areas of Britain from Sunday, 7 June, 2026**

Generally unsettled next week - showers affect most hills Monday and Tuesday, lowest cloud and most persistent rain along western slopes, but with some breaks as well with sunshine. Risk of a deeper area of lower pressure from Wednesday or later bringing widespread strong winds, probably gales over many summits, with prolonged heavy rain. Temperatures trending milder again into next weekend, pressure may begin to rise in the south to give drier weather more widely with time.
