General Summary for Monday, 9 November, 2026

British Mountain Summary:
Based on forecast chart for noon 9 November, 2026

Many Scottish mountains sunny, but variable areas of low cloud and low-level fog. Murky conditions more widely Pennines and east Wales. No rainfall generally, but dampness in the air locally. Light wind for most places; increasing easterly breeze for Wales.

Headline for Southern Uplands

Some fog and low cloud east, sunnier west.

Detailed Forecast for Monday, 9 November, 2026

How windy? (On the summits) **Effect of wind on you?**	Easterly 10mph or less further northeast, but Galloway hills more often 10-15mph, rising a little up to dusk. **Small**
How wet? (Precipitation and its impact)	**No rain expected** Locally feeling damp where in fog.
Cloud on the hills? **Chance of cloud free summits?**	**Varied fog and low cloud** Banks of cloud mostly over eastern hills, plus areas of fog in the valleys. Some slopes may be clearer between fog layers and higher tops may poke above most fog. Clearer in areas west of the M74. **50% east to 80% west.**
Sunshine? Air clarity (below cloud)	Sunshine best toward west, especially Galloway where visibility excellent. Areas of fog east and northern areas, hazy even if fog clears.
How Cold? (at 750m) **Freezing Level**	2 or 3C. Above the summits, but patchy frost some inland valleys early morning.

Southern Uplands - Looking Ahead

	Tuesday 10 November	Wednesday 11 November
How windy? (On the summits)	Southeasterly 15 to 20mph, strongest over Galloway hills and gusty, may reach 25mph.	Northeasterly 10 to 20mph, strongest over southernmost tops.
Effect of wind on you?	**Fairly small, but noticeably breezy and in places toward the west gusts starting to affect comfortable walking.**	**Fairly small.**
How wet? (Precipitation and its impact)	**Rain not expected**	**Largely dry** Chance of an odd brief light shower mainly easternmost hills, sleet on highest tops.
Cloud on the hills?	**Areas of fog, most widely east hills** Various cloud banks, including some fog on lowest terrain. A deck of cloud may drift around many eastern hills up to some tops. Some slopes may emerge between fog layers. Generally clearer hills westwards.	**Most persistent N/E, better SW** Banks of cloud drifting over higher slopes from Lothians to Cheviots much of the day, some local fog patches possible lower down. Further west, the cloud more broken, and southwestern hills clearer.
Chance of cloud free summits?	**50%**	**30% north/east, to 70% southwest**
Sunshine? Air clarity (below cloud)	Sun fairly weak through high cloud. Visibility very good in places, but some haze or patchy fog in valleys.	Sunshine most extensive across Galloway, patchier elsewhere. Visibility very good, or excellent in west.
How Cold? (at 750m)	3 or 4C.	2 or 3C.
Freezing Level	Above the summits, but frost likely in sheltered valleys early morning.	Above the summits, but frost in sheltered valleys in the morning, particularly western areas.

Planning Outlook

All mountain areas of Britain from Tuesday, 10 November, 2026

Generally dry much of the week ahead in Scotland. Some variable cloud and fog early in the week. A gusty easterly wind for England & Wales and rain pushes into Wales on Tuesday, reaching the south Pennines with time, persisting into Wednesday in these areas, but very little extending further north. Into the second half of the week, a switch to a colder northerly flow will likely drop the freezing level to 800 m increasingly widely for Thursday-Friday, plus frost on low ground. Some snow showers on northern Scottish mountains, but largely dry weather elsewhere. During next weekend, a shift to a less cold Atlantic influence - a changeable mix likely into the following week.

Forecast issued at 15:00 on Sunday, 8 November, 2026
