General Summary for Tuesday, 10 November, 2026

British Mountain Summary:
Based on forecast chart for noon 10 November, 2026

Much of Scotland dry with sunshine; areas of low-level fog and frost. Some showers toward the far north. Fog from lower elevations upward for Pennines and east Wales, but much of northwest Wales and the Lakes have clearer hills. Rain moves into south Wales. Strong easterly winds for Wales.

Headline for Southern Uplands

Low cloud and fog in places, hazy sun. Light wind.

Detailed Forecast for Tuesday, 10 November, 2026

How windy? (On the summits)	East to southeasterly 10mph or in places less, local 15mph Cheviots and perhaps west Galloway hills at times.
Effect of wind on you?	**Small**
How wet? (Precipitation and its impact)	**Rain not expected**
Cloud on the hills?	**Areas of fog, most widely east hills and valleys** Various cloud banks, including some fog on lowest terrain. A deck of cloud drifts around many eastern hills up to some tops. Some slopes may emerge between or above fog layers. Generally clearer hills westwards.
Chance of cloud free summits?	**50% east, to 80% west**
Sunshine? Air clarity (below cloud)	Sun fairly weak through high cloud. Visibility very good in places, but some haze or patchy fog in valleys.
How Cold? (at 750m)	2 or 3C.
Freezing Level	Above the summits, but frost in sheltered valleys early morning.

Southern Uplands - Looking Ahead

	Wednesday 11 November	Thursday 12 November
How windy? (On the summits)	Northeasterly 10 to 15mph, or 20mph over southernmost tops early morning. Shifting northerly and rising a little by evening.	Northerly 25 to 35mph, strongest over higher Cheviots, may be 40mph at times.
Effect of wind on you?	**Mostly small.**	**Affecting comfortable walking on exposed high terrain, more strenuous toward east. Considerable wind chill.**
How wet? (Precipitation and its impact)	**Largely dry** Chance of an odd brief light shower mainly easternmost hills early morning, sleet on highest tops.	**Most places dry** An odd brief shower mainly toward the North Sea coast.
Cloud on the hills?	**Mostly north and east in morning** Banks of cloud drifting over higher slopes from Lothians to Cheviots in morning, tending to thin and break; some local fog patches possible lower down. Further west, the cloud more broken, and southwestern hills clearer.	**Little or none** Rare patches may drift onto The Cheviot, perhaps furthest west tops in Galloway too.
Chance of cloud free summits?	**50% north/east, to 80% southwest**	**90%**
Sunshine? Air clarity (below cloud)	Sunshine most extensive across Galloway, patchier elsewhere. Visibility very good, or excellent in west.	Extensive sunshine. Visibility excellent.
How Cold? (at 750m)	2C most or all day, then dropping to -1C into night.	Around 0C. Feeling like -10C directly in the wind, risk -15C on The Cheviot at times.
Freezing Level	Just above summits during day, but frost in valleys in morning. Dropping to freezing or below at most heights into night.	700-800m. Frost widely in valleys in morning, all day out of sunlight.

Planning Outlook

All mountain areas of Britain from Wednesday, 11 November, 2026

Dropping colder across all mountains during midweek as the wind shifts northerly and strengthens. Some showery snowfall across the Highlands on Wednesday, otherwise plenty of sunshine and very clear air late this week, for all areas - clearing away fog from early in the week. Into the weekend, as the wind shifts west then southwesterly, less cold air drifts in from the Atlantic bringing more cloud onto western hills - an increasing risk of rain in the west. A changeable outlook into next week with varying temperatures, stronger wind at times, rain and some upland snow possible. Unsettled patterns are more likely to prevail beyond mid-month.
