General Summary for Wednesday, 11 November, 2026

British Mountain Summary:
Based on forecast chart for noon 11 November, 2026

Many places stay dry all day with sunshine and broken cloud. Below freezing on Scottish tops. A band of rain and hill snow moves into northern Scotland during the day, plus a strengthening northwesterly wind. Easterly winds for Wales, light rain in the south fizzles out, but leaves low cloud and dampness.

Headline for Southern Uplands

Dry with sun, most hills clear; light wind much of day.

Detailed Forecast for Wednesday, 11 November, 2026

How windy? (On the summits)	Easterly 10 to 15mph at first, soon variable and often little wind. During afternoon becoming north-northwesterly rising 10-20mph. After dark, strengthening further to 30-40mph, strongest east.
Effect of wind on you?	**Mostly small.** **Deteriorating evening into night.**
How wet? (Precipitation and its impact)	**Largely dry** Chance of an odd brief light shower mainly easternmost hills early morning, sleet on highest tops.
Cloud on the hills?	**Mostly north and east in morning** Banks of cloud drifting over higher slopes from Lothians to Cheviots in morning, tending to thin and break; some local fog patches possible lower down. Further west, the cloud more broken; Galloway hills largely clear.
Chance of cloud free summits?	**50% north/east, to 80% southwest**
Sunshine? Air clarity (below cloud)	Sunshine most extensive across Galloway, patchier elsewhere in morning, but breaking through increasingly sunnier. Visibility very good, or excellent in west.
How Cold? (at 750m)	2C most or all day, then dropping to -1C into night.
Freezing Level	Just above summits during day, but frost in valleys in morning. Dropping to freezing or below at most heights into night.

Southern Uplands - Looking Ahead

	Thursday 12 November	Friday 13 November
How windy? (On the summits) **Effect of wind on you?**	Northerly 25 to 35mph, strongest over higher Cheviots, 40mph at times in the morning. **Affecting comfortable walking on exposed high terrain, more strenuous toward east. Considerable wind chill.**	Northwesterly, turning westerly later in the day, around 20mph, perhaps slightly stronger on Cheviots early in day. **Fairly small effect on walking, but marked wind chill on exposed terrain.**
How wet? (Precipitation and its impact)	**Most places dry** An odd brief shower mainly toward the North Sea coast.	**Substantially dry** Chance of an odd light shower mainly toward the west of Galloway.
Cloud on the hills? **Chance of cloud free summits?**	**Little or none** Rare patches may drift onto The Cheviot, perhaps furthest west tops in Galloway too. **90%**	**Most likely none** Chance of odd patches of cloud drifting onto tops furthest west in Galloway. Otherwise the hills clear. **90%**
Sunshine? Air clarity (below cloud)	Extensive sunshine. Visibility excellent.	Mostly sunny, a little high cloud may drift in from the northwest. Visibility excellent.
How Cold? (at 750m) **Freezing Level**	Around 0C. Feeling like -10C directly in the wind, risk -15C on The Cheviot at times. 700-800m. Frost widely in valleys in morning, all day out of sunlight.	-1C rising to +1C. Wind chill feeling around -7C. Much terrain frozen from dawn with frost all day out of sunlight, otherwise tending to lift just above freezing to higher slopes.

Planning Outlook

All mountain areas of Britain from Thursday, 12 November, 2026

Chillier in the second half of this week with frost widely, but much clearer conditions for all with sunshine. Into the weekend, as the wind shifts west then southwesterly, less cold air drifts in from the Atlantic bringing more cloud onto western hills - some rain mainly in western Scotland, whilst England and Wales may remain largely dry for the weekend. A changeable outlook into next week with varying temperatures, stronger wind at times, rain and some upland snow possible. Unsettled patterns are more likely to prevail beyond mid-month.
