Based on forecast chart for noon 21 November, 2026

Fine, cold and light wind most areas. Bright sunshine widely but the ground frozen or partly frozen. Less cold with cloud coming and going Wales, and also cloudy for periods southern Scotland and Cumbria with chance of a little light precipitation.

Headline for Southern Uplands

Terrain mostly frozen. Light wind. Very likely dry.

Detailed Forecast for Saturday, 21 November, 2026

How windy? (On the summits)	Morning: Variable direction less than 10mph. Afternoon: Easterly 10mph, by dusk 15mph to locally 20mph west of M74.
Effect of wind on you?	**Mostly negligible**
How wet? (Precipitation and its impact)	**Risk of a little rain, snow higher slopes west of M74** Chance of a little light rain, or on higher slopes snow, for perhaps an hour west of M74, Isolated, if any precipitation elsewhere. Total precipitation small.
Cloud on the hills?	**Little if any** Most or all hills free of fog, bit chance for an hour or two Galloway of patches covering higher tops.
Chance of cloud free summits?	**Greater than 90%**
Sunshine? Air clarity (below cloud)	Extensive sunshine Cheviots and near Lothians. Elsewhere banks of cloud, sometimes extensive, particularly west of M74 where there may be little sun at all. Mostly superb visibility though risk fog some valleys.
How Cold? (at 750m)	0C.
Freezing Level	700 to 800m. Much lower terrain frozen in morning, all day some areas out of sunlight.

Southern Uplands - Looking Ahead

	Sunday 22 November	Monday 23 November
How windy? (On the summits)	Easterly 20 to 30mph, locally very gusty, sometimes on lower slopes.Strongest wind west of M74, where possibly 35-40mph.	Southeasterly between 15 and 25mph, strongest Galloway.
Effect of wind on you?	**Considerable wind chill and sometimes abrupt, gusty winds will make balance difficult in places; sometimes on lower slopes.**	**Fairly small.**
How wet? (Precipitation and its impact)	**Precipitation not expected** Risk snow flurries, or very light rain lower slopes.	**Precipitation very unlikely** Possibly the odd very light shower.
Cloud on the hills?	**Little if any** A few patches may shroud tops above 750m	**Very little: Confined to highest tops** Banks of cloud may come and go above 700m.
Chance of cloud free summits?	**80%**	**80%**
Sunshine? Air clarity (below cloud)	Bright sunshine frequently, banks of cloud will come and go - most widely. Visibility excellent.	Patchy sunshine and very good visibility.
How Cold? (at 750m)	0C. Will feel as cold as minus 8C directly in the wind.	1C. Will feel as cold as minus 5C in the wind.
Freezing Level	800m. Terrain frozen or partly frozen lower slopes, particularly those out of the sun.	800m. Some lower areas partly frozen after a frost in sheltered valleys.

Planning Outlook

All mountain areas of Britain from Sunday, 22 November, 2026

Extensively dry and cold conditions will tend to be eroded away from the west only slowly early next week as high pressure to the east gives way only slowly. Rain, or on higher areas, particularly Scotland, snow, will occasionally make inroads into Wales on Sunday and Monday before the precipitation , together with strong winds progresses across the country. Further bands of precipitation will follow, together with areas of upland gale and low cloud. All in all temperature levels remaining below normal.

Forecast issued at 7:26 on Saturday, 21 November, 2026
