## General Summary for Tuesday, 12 May, 2026

### British Mountain Summary:

**Based on forecast chart for noon 12 May, 2026**

Scotland: Feeling cold in the gusty westerly winds. Early band of rain will clear to brighter skies and scattered showers. Showers more frequent later in day with risk of hail and thunder.

England and Wales: Chilly with gusty westerly winds. Showery rain for a time, then brighter with a few passing showers.

### Headline for West Highlands

Cold for May, strong west winds. Early rain then showers, hail and hill snow.

## Detailed Forecast for Tuesday, 12 May, 2026

<b>How windy? (On the Munros)</b>	Westerly 30 to 45mph, squally gusts around showers.
<b>Effect of wind on you?</b>	<b>Frequent buffeting across the hills, challenging walking at times in exposure. Significant wind chill.</b>
<b>How wet? (Precipitation and its impact)</b>	<b>Showery, hail and snow on tops</b> A band of rain clears southeast at dawn, then a scattering of showers becoming more frequent later in day from northwest, some heavy, snow falling at times to 800m, also hail to lower slopes. Chance of isolated thunder and lightning.
<b>Cloud on the hills?</b>	<b>Varied on tops, lifting higher with breaks</b> Cloud frequently changing, covering tops above 800m for periods, but tending to rise higher in afternoon, with time only occasionally capping tops.
<b>Chance of cloud free Munros?</b>	<b>40%</b>
<b>Sunshine? Air clarity (below cloud)</b>	Bursts of sun coming through. Visibility often very good, but intermittently very poor during showers.
<b>How Cold? (at 900m)</b>	1 to 3C. Feeling like -10 to -15C directly in the wind on tops..
<b>Freezing Level</b>	1000 to 1200m, highest inland toward central highlands afternoon.

## West Highlands - Looking Ahead

	Wednesday 13 May	Thursday 14 May
<b>How windy? (On the Munros)</b>  <b>Effect of wind on you?</b>	North to northwesterly 25 to 30mph, strongest toward coast, risk increasing all western hills later toward 40mph.  <b>Significant wind chill, very blustery, may become more challenging in exposure over coastal and island mountains.</b>	North-westerly 15 to 25mph  <b>Feeling cold for mid May, with considerable chill in the north-westerly wind.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Showery, hail and hill snow</b> Showers mostly coastal mountains early morning, then developing increasingly widely inland, heavy bursts with hail, risk isolated thunder; snow often falling on the Munros, at times down to 700m.	<b>Showers, increasingly widespread.</b> Initially mostly dry, but showers will develop widely through day, containing hail with snow above 700-900m. Risk, persistent precipitation edging into coast.
<b>Cloud on the hills?</b>	<b>Varying quickly over high tops</b>  Cloud frequently changing over the tops, around showers fairly extensive above 900-1000m, ragged patches to 600m, but periods where breaking to clear even highest slopes.	<b>Bases varied, often banked across tops.</b>  Cloud bases varying through day, particularly in and out of showers, but banks may be fairly persistent on tops above 800-1000m. Best breaks in south.
<b>Chance of cloud free Munros?</b>	<b>40%</b>	<b>50%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Brief bursts of sun and intermittently excellent visibility, but suddenly appalling where in cloud, snow or hail.	Skies often filled in with cloud limiting the sun to glimpses. Visibility very good, but lowering to become poor or very poor in showers.
<b>How Cold? (at 900m)</b>  <b>Freezing Level</b>	0C rising to 3C. Wind chill feeling like -10C, nearer -15C as speeds increase.  900m early morning, rising to 1200m or above into afternoon, but lowering slightly in showers.	Around freezing  900-1000m

**Planning Outlook****All mountain areas of Britain from Wednesday, 13 May, 2026**

Notably chilly for mid-May across the hills this week as air from the north-northwest prevails. Frequently near or below freezing over Scottish Munros, and at times dropping to freezing on high tops in England and Wales. Wind speed will vary, but increasing at times to gale force on hills, giving significant chill factor. Broadly showery, heavy bursts with hail and thunder in places, also often falling as snow on higher mountains, at least in Scotland, intermittently elsewhere. Some more persistent precipitation especially northwest Scotland. Also some drier windows - varying locally day-to-day - away from showers cloud will lift above hills and visibility will be very good. Less windy and fewer showers suggested by next weekend into early next week.
