General Summary for Sunday, 18 October, 2020

British Mountain Summary:

Based on forecast chart for noon 18 October, 2020

Little wind across the hills for much of the day with extensive cloud sheet covering many higher slopes across the Highlands, but mainly above tops elsewhere. Here and there breaks in the cloud sheet giving sunshine. Mostly dry, but risk of a few showers; particularly W Scotland.

Headline for Yorkshire Dales and North Pennines

Little wind. Extensive cloud sheet, but hills mostly clear below this. Risk showers.

Detailed Forecast for Sunday, 18 October, 2020

How windy? (On the summits)	Very little wind at all post dawn. Will become southwesterly strengthening toward 15 to 20mph by dusk.
Effect of wind on you?	Mostly negligible
How wet? (Precipitation and its impact)	Risk of showers Extensively dry, although threat of clusters of showers drifting in off the Irish Sea, most likely afternoon.
Cloud on the hills? Chance of cloud free summits?	Summits extensively cloud free Extensive cloud sheet above the summits although here and there fragments of fog 'hanging' on higher slopes. Also gradually initially above western dales patches increasingly forming at around 600m, locally 450m near rain. 80%
Sunshine? Air clarity (below cloud)	Generally cloudy, although pockets of sunshine coming through here and there, locally for an hour or so. Excellent visibility.
How Cold? (at 700m) And in the valleys	4C Will rise to around 10C in the afternoon.

Yorkshire Dales and North Pennines - Looking Ahead

	Monday 19 October	Tuesday 20 October
How windy? (On the summits)	South to southwesterly; in the range 30 to 40mph.	Low confidence in detail: South to southwesterly 20 to 40mph.
Effect of wind on you?	Significant and wind chill on higher areas.	Likely fairly arduous at times across the hills with significant wind chill.
How wet? (Precipitation and its impact)	Rain; may become extensive Some uncertainty in timing of rain as it extends inland off the Irish Sea. It may fall most of the day, particularly N Pennines, but chance that the rain progresses only slowly eastwards, particularly into N Yorks.	Showery bursts, mostly in the west. Showery bursts of rain at times through the day across the western Dales. Whilst a few of these will reach eastern areas, most of the day will be dry here.
Cloud on the hills?	May become extensive Typical cloud base 650-800m. However, as rain spreads inland, so cloud base is likely to drop, perhaps to 300m western dales south of Kirkby Stephen.	Higher western tops. Clearer in the east. Cloud frequently covering higher tops across the western Dales through the day. Further east, a few patches high tops around showers, but mainly clear.
Chance of cloud free summits?	40%	60%
Sunshine? Air clarity (below cloud)	Sunshine rarely lower areas eastern dales. General haze, and visibility poor in rain.	Occasional patches of sun. Visibility good or in the east very good.
How Cold? (at 700m)	5C	8C
And in the valleys	11C.	13 to 15C

Planning Outlook**All mountain areas of Britain from Monday, 19 October, 2020**

Low pressure will envelop Britain on Monday, heralding a change to intermittently windy weather and frequent periods of rain; particularly across Scotland where large accumulations will build up across the Southern Uplands and southern and western Highlands with conditions becoming very wet underfoot. Chiller again from Wednesday or Thursday with rain then falling as snow across the Munros.

Forecast issued at 15:05 on Saturday, 17 October, 2020

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2020.
