<b>Chance of cloud free summits?</b>	<b>Starting 30%, rising toward 80%</b>	<b>10% rising to 30%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Little sunshine through clouds later in the day. Visibility good, possible slight haze.	Mostly dull, little chance for few sunbeams through the clouds in the afternoon between the showers. Poor visibility, improving if clouds lift.
<b>How Cold? (at 700m)</b>	9 to 11C.	9 to 11C.
<b>And in the valleys</b>	8C at dawn, rising to 15C.	9C at dawn, rising to 15C.

**Planning Outlook**

**All mountain areas of Britain from Saturday, 25 May, 2024**

Low pressure system will fade upon the weekend arrival, allowing for a short improvement in the weather on Saturday. Into Sunday, shallow low from the east brings a risk of worsening conditions in Scotland and northern England, while western areas will see a new cold front coming from the Atlantic bringing moist, unstable air and spells of rain or showers, continuing into Bank Holiday. With a series of fronts from the west, next week will likely stay changeable, with more cloudy and wet days than sunny spells.

**Forecast issued at 16:22 on Thursday, 23 May, 2024**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2024.
