Full day weather skills course - see mwis.org.uk/information/day-with-mwis for info and booking

General Summary for Friday, 9 May, 2025

British Mountain Summary:

Based on forecast chart for noon 9 May, 2025

In Scotland, thin mist in the glens and isolated cloud caps over highest tops at dawn will soon clear for cloud free hills. Isolated low morning fog in eastern valleys of England and Wales as well, also soon clearing. A patchwork of sun for most as high fair-weather cloud builds, feeling warm in direct sun. Mostly light winds.

Headline for Yorkshire Dales & North Pennines

Dry with patchy high cloud; feeling warm in the sun

Detailed Forecast for Friday, 9 May, 2025

How windy? (On the summits)	Variable direction 10mph or less, becoming generally southerly after noon.

And in the valleys	5C or locally cooler at dawn. Rising toward 17C during afternoon.	5C at dawn, rising to 18C

Planning Outlook**All mountain areas of Britain from Saturday, 10 May, 2025**

Low pressure south and west of the British Isles will facilitate bursts of rain into Wales though the weekend into next week. High pressure to the east keeps most eastern areas settled during this time. The continental wind track will keep most cloud above the summits, with eastern areas often sunny. Generally settled conditions prevail next week as high pressure reestablishes just north of the British Isles, though odd bursts of rain come and go in Wales. A mix of cloud and sun with light winds, generally easterly though variable. Slight frosts at dawn in sheltered spots, mostly warm by day. Very dry ground conditions, beware high risk of fire.

Forecast issued at 15:30 on Thursday, 8 May, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
