General Summary for Saturday, 31 May, 2025

British Mountain Summary:

Based on forecast chart for noon 31 May, 2025

An active front moving west to east across the country will bring showery rain and upland wind, initially to the western Highlands and Galloway then across the Cairngorms, England and possibly Wales in the late afternoon and evening. Before this, risk of drizzly rain in west-coastal regions, but otherwise often dry with some patchy cloud.

Headline for Yorkshire Dales & North Pennines

Mostly dry away from Three Peaks area until evening

Detailed Forecast for Saturday, 31 May, 2025

How windy? (On the summits)	Southwesterly 20 to 30mph, reaching 35mph around higher tops later afternoon into evening.
Effect of wind on you?	Blustery, starting to affect comfortable walking on some higher exposed fells. Marked wind chill.
How wet? (Precipitation and its impact)	Often dry, locally drizzly Dales; wet later Often dry towards the north and east until evening. Drizzle or light rain mostly toward western Yorkshire Dales. Toward evening, more persistent rain moving in from the west across the region.
Cloud on the hills?	Mostly western Dales in morning Some banks of low cloud mostly westernmost Yorks Dales NP up to Tebay, down to mid-slopes in morning. May lift and break above hills into afternoon. Further north/east, patchy cloud in morning, then clear until late.
Chance of cloud free summits?	40% southwest, 80% north/east.
Sunshine? Air clarity (below cloud)	Glimpses of sun mostly north and eastwards. Visibility good many areas out of cloud, locally misty start Three Peaks area.
How Cold? (at 700m)	9 to 13C, slow change with height. Feeling around freezing in the wind.
And in the valleys	9C at dawn, rising to a fairly humid 20C by afternoon.

All mountain areas of Britain from Sunday, 1 June, 2025

Remaining unsettled into the first week of June as low pressure and frontal systems pass west to east. West to southwesterly winds prevailing, speeds varied, but gale force for periods on the mountains. Spells of rain and showers, some periods of sustained heavier rain mixed with thundery showers at times. Cloud often shrouding higher terrain. Brief ridges of high pressure afford short-lived windows of drier and clearer weather, especially Monday morning to early afternoon. Temperatures near average, although often cooler in northern Scotland, feeling chilly where exposed to strong winds.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
