General Summary for Thursday, 26 June, 2025

British Mountain Summary:

Based on forecast chart for noon 26 June, 2025

Patchy rain at dawn for most clears to the east for a substantially dry afternoon with patchy or frequent sun. Patchy cloud over western Scotland and Lakeland may be slow to clear as occasional showers and drizzle drift in from the west. Feeling chilly in brisk winds, rising to near gale-force in Scotland later afternoon.

Headline for Yorkshire Dales & North Pennines

Morning rain gradually breaking and fading; windy, feeling cool

Detailed Forecast for Thursday, 26 June, 2025

How windy? (On the summits)	Southwesterly 25-30mph, shifting westerly around midday. Most wind around 30mph or gusting slightly stronger into evening.
Effect of wind on you?	Walking impeded in strongest winds, stability challenged at times. Marked wind chill.
How wet? (Precipitation and its impact)	Morning rain, then substantially dry Often raining through morning, possibly quite persistent west Yorks Dales. Largely clearing east afternoon though some drizzly rain may linger on high westernmost slopes for a time.
Cloud on the hills?	Fairly extensive on high areas early, largely clearing summits by afternoon Quite extensive above 600-700m at dawn; variable patches on lower slopes near rain, notably western Yorkshire Dales. Lifting through morning for largely cloud-free fells by afternoon. A few passing caps may drift over the tops of the Three Peaks at times.
Chance of cloud free summits?	Becoming above 90%
Sunshine? Air clarity (below cloud)	Only glimpses of sun through morning, best east. Sunshine in and out later, possibly frequent for a time. High cloud returning towards evening. Excellent visibility.
How Cold? (at 700m)	12C, cooling to 9 or 10C through afternoon, warmest areas eastern slopes. Feeling near or just above freezing in wind.
And in the valleys	13 or 14C at dawn, rising up to 16C for a time. Becoming variable between these temperatures through afternoon, generally cooler in western valleys.

All mountain areas of Britain from Friday, 27 June, 2025

An unsettled start to the weekend with low pressure north of the British Isles facilitating strong winds and rain on Friday into Saturday, gale force for a time over high tops. High pressure begins pushing north on Saturday, starting a drying trend for England and Wales, though low pressure will break through at times. Sunday into Monday may be quite unsettled for Scotland and northern England. Generally sunnier next week, at times fairly extensive between low pressure systems, greatest risk of rain north and west areas when low pressure passes. Lighter winds than recently with temperatures near or above average.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
