General Summary for Monday, 7 July, 2025

British Mountain Summary:

Based on forecast chart for noon 7 July, 2025

Northwesterly winds will be blustery over the mountains, feeling distinctly chilly in exposure. Plenty of dry weather, some showers toward the north and east of Scotland. Showery rain for Wales early in the day fades. Cloud clearing many tops and some sun.

Headline for Yorkshire Dales & North Pennines

Windy and cool. Broken cloud and sun, risk local showers.

Detailed Forecast for Monday, 7 July, 2025

How windy? (On the summits)	Northwesterly 25mph. Strengthening later, up to a gusty 35mph over tops.
Effect of wind on you?	Strongest winds affecting comfort of walking, particularly late in the day with buffeting gusts.
How wet? (Precipitation and its impact)	Little rain expected Local light rain in the morning soon fades, then largely dry with low risk an isolated shower later toward eastern hills.
Cloud on the hills?	Tops soon cloud-free Patchy banks over fell tops at dawn soon lift above the summits.
Chance of cloud free summits?	Above 90%
Sunshine? Air clarity (below cloud)	Often sunny, fair weather cloud building afternoon. Excellent visibility.
How Cold? (at 700m)	8C rising to 12 or 13C, local warmer areas southern Dales. Feeling like 2C in the wind in morning, 5C afternoon.
And in the valleys	8C at dawn rising to 16C, local warmer areas south/eastern Dales.

Yorkshire Dales & North Pennines - Looking Ahead

	Tuesday 8 July	Wednesday 9 July
How windy? (On the summits) Effect of wind on you?	Northwest then westerly 15-25mph, easing for a time during morning, then increasing again later in daytime. Fairly small, becoming noticeably breezier later.	Westerly 15 to 20mph, up to 25mph for a time in morning higher North Pennines. Fairly small.
How wet? (Precipitation and its impact)	Little or no rain Small chance local spots of drizzly rain late in the day. May be entirely dry.	Some drizzly rain in morning Patchy drizzle or local light rain in the morning, mainly toward north and west. Fading to become generally dry.
Cloud on the hills?	Fells cloud-free after morning Patchy banks of cloud drift around high fells early, notably N Pennines, soon lifting off the summits. Intermittent banks will return to high tops of N Pennines as night falls.	Fairly extensive, some improvement Covering fells fairly widely above 500-600m in morning, or lower for a time in west. Base rising and breaks forming toward higher slopes in east, but may linger over western tops.
Chance of cloud free summits?	Above 90% most of the day	20% rising to 50%
Sunshine? Air clarity (below cloud)	Morning sunshine gradually weakened by building high cloud.	Largely cloudy, a little sun breaking through mainly toward east. Visibility becoming good below cloud.
How Cold? (at 700m) And in the valleys	8C at dawn, rising to 12 or 13C, warmest on east slopes. 8C at dawn, rising to 16 or 17C.	12C rising to 15C afternoon, humid. 11C at dawn, rising to 21C afternoon.

Planning Outlook**All mountain areas of Britain from Tuesday, 8 July, 2025**

Low pressure to the northwest maintains a humid southwesterly wind mid-late this week, with fronts situated near northwestern coasts - often extensive low cloud here with some drizzly rain. Drier with sun and broken cloud in east and southern Scotland. High pressure expanding over England and Wales brings more sunshine and draws in increasingly very warm air again in the later part of this week, higher temperatures extending into Scotland with time; some mist may continue to affect coasts in the west.
