General Summary for Saturday, 9 August, 2025

British Mountain Summary:

Based on forecast chart for noon 9 August, 2025

Windy, gales over Scottish mountains and highest tops in northern England throughout the day. A cold front brings a band of showery rain, weakening as it moves southwards. Showery much of the day in western Scotland, scattered heavy showers advancing east over the Highlands. Feeling chilly on tops.

Headline for Yorkshire Dales & North Pennines

Windy, gales on tops. Showery rain for a few hours.

Detailed Forecast for Saturday, 9 August, 2025

How windy? (On the summits)	Southwesterly 30 to 40mph, up to 50mph for periods on higher N Pennines.
Effect of wind on you?	Strenuous walking on exposed higher terrain, frequent buffeting in places. Marked wind chill.
How wet? (Precipitation and its impact)	Showery rain for a time morning-midday Odd pockets of drizzle western Dales early morning. Then during morning a few hours with rain on and off, showery bursts briefly, easing by early afternoon to leave light showers, but becoming largely dry, soonest northern areas.
Cloud on the hills?	Varied, lowest west and most tops in rain Patchy cloud banks western slopes in Yorks Dales at first. Then in rain, lowering cloud over most high tops, base around 600-700m, or higher in east. Bases rising afternoon, breaks forming with time to most tops.
Chance of cloud free summits?	60%
Sunshine? Air clarity (below cloud)	A little early sun and good visibility, clouding over with reduced visibility in rain, then improving through afternoon from northwest with sun breaking through.
How Cold? (at 700m)	9 to 11C. Feeling near/just below freezing in wind.
And in the valleys	11C at dawn, rising to 19C afternoon.

Yorkshire Dales & North Pennines - Looking Ahead

	Sunday 10 August	Monday 11 August
How windy? (On the summits) Effect of wind on you?	Westerly 25mph, to 30mph N Pennines for a few hours from dawn, easing and turning southwest 15mph, occasionally Blustery and feeling chilly early in day, becoming mostly small.	Southwest later southerly, risk gusty 20-30mph at first, strongest N Pennines, easing to 15mph, likely less into afternoon. Blustery start, mostly northern tops, likely to become small.
How wet? (Precipitation and its impact)	Rain not expected	Local drizzle west Patchy drizzle, may stay persistently damp for several hours through morning where in cloud western Yorks Dales NP, tending to fade to become dry into afternoon.
Cloud on the hills?	Local patches clearing Patches of cloud around some slopes in western Yorks Dales in morning, lifting, but may cap Ingleborough and nearby for a few hours, breaking above the hills midday into afternoon.	Local morning low cloud west Dales Banks of low cloud from Ingleborough to Howgills areas early morning, may persist for a few hours, tending to thin and all break by middle of day. Further north and east, any early patches soon clearing.
Chance of cloud free summits?	70% rising above 90%	70%
Sunshine? Air clarity (below cloud)	Mostly sunny. Visibility increasingly very good.	Sun and high cloud, visibility good, but some haze; locally mistier western Yorks Dales in morning.
How Cold? (at 700m) And in the valleys	9C rising to 13C afternoon, may rise slightly higher evening onward. Feeling near freezing in wind in morning. 11C at dawn, rising to 21C afternoon.	12C where in cloud in morning, rising to 17C afternoon; feeling humid. 13C at dawn, rising to 24C afternoon.

Planning Outlook

All mountain areas of Britain from Sunday, 10 August, 2025

A ridge of high pressure expands briefly northwards on Sunday - most places dry all day, variable cloud and some warm sun. A front moves in from the southwest later and will affect Scotland into Monday with rain, drizzle and low cloud, also damp and misty at least on Monday morning for the Lakes. Very warm and humid over England and Wales in the first half of the week, but this comes with a risk of thundery bursts of rain drifting northeastwards. Less warm for Scotland, though humid for a time. Later in the week, southwesterlies prevail in Scotland, low cloud often covering western hills, but small amounts of rain. Higher pressure further south, mostly dry and warm England, Wales & S/E Scotland.

Forecast issued at 16:31 on Friday, 8 August, 2025
