General Summary for Tuesday, 16 September, 2025

British Mountain Summary:

Based on forecast chart for noon 16 September, 2025

Strong upland winds across the UK in the morning will ease from the west into the afternoon. Frequent showers in west-coastal regions; more scattered inland with the Peak District and Cairngorms National Parks becoming or staying largely dry. Extensive cloud on most high ground. Temperatures feeling cool.

Headline for Yorkshire Dales & North Pennines

Strong upland wind, easing. Showery

Detailed Forecast for Tuesday, 16 September, 2025

How windy? (On the summits)	Westerly 30 to 35mph at first, strongest over highest tops, easing into the afternoon to 25mph.
Effect of wind on you?	Arduous conditions through morning, significant wind chill. Easing into the afternoon.
How wet? (Precipitation and its impact)	Periods of showery rain Showers, some drizzly in nature, rather frequent for a few hours western Yorkshire Dales southwards. Scope for a heavy burst or two. Becoming more scattered in the afternoon.
Cloud on the hills?	Lifting to or above tops afternoon. Banks of cloud on upper slopes from dawn, most extensive Ingleborough area. Bases lifting and breaking and by afternoon tops will likely often clear.
Chance of cloud free summits?	30% lifting to 70%
Sunshine? Air clarity (below cloud)	Sunny intervals coming through. Hazy later due to high cloud. Visibility very good away from showers.
How Cold? (at 700m)	8C. Feeling below freezing in the wind.
And in the valleys	11 to 14C, small variation all day.

All mountain areas of Britain from Wednesday, 17 September, 2025

An ongoing unsettled outlook generally dominated by low pressure. Extensive rain and gales into midweek, likely wettest on west-coastal regions. Areas of rain and showers frequently in the forecast later in the week. Temperatures near-average, but feeling cool when exposed to wind. A chillier northwesterly may emerge by next weekend, briefly dropping near freezing on highest Scottish tops. Indications then favour higher pressure at least briefly expanding northwards early next week for some drier days, but unlikely to settle down for long.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
