South-westerly gales with frequent rainfall and extensive hill fog.

Detailed Forecast for Monday, 3 November, 2025

How windy? (On the summits)	Southwesterly 35-45mph to where exposed above 600m risk above 50mph.
Effect of wind on you?	Difficult walking and significant wind chill where exposed on higher tops.
How wet? (Precipitation and its impact)	Frequent rain, near constant west Frequent or almost incessant rain, sometimes heavy; particularly western dales between Ingleton and Tebay. Last rain easternmost hills.
Cloud on the hills?	Extensive Fog widely from lowest slopes up western dales south Tebay. Cloud base 450 to 600m N Pennines and eastern dales in Yorkshire.
Chance of cloud free summits?	Almost nil
Sunshine? Air clarity (below cloud)	Dull and misty or foggy.
How Cold? (at 700m)	10C. Feeling below freezing in exposure to wind.
And in the valleys	10C from dawn rising to 12 to locally in eastern dales 14C.

Yorkshire Dales & North Pennines - Looking Ahead

	Tuesday 4 November	Wednesday 5 November
How windy? (On the summits)	South to southwesterly 35mph, but nearer 45mph on higher tops.	Southerly 25 to 35mph in the morning, easing down to 15 to 25mph in afternoon.
Effect of wind on you?	Continued arduous or difficult conditions where exposed on higher areas, where wind chill will be significant.	Be prepared for fairly arduous conditions in the morning with considerable wind chill. Easing into afternoon.
How wet? (Precipitation and its impact)	Frequent or persistent rain. Rain most or all day. Breaks in the rain mostly north Pennines and more eastern dales elsewhere. Very wet underfoot and streams in spate - possible flooding western areas between Ingelton and Tebay.	Frequent rainfall Frequent pulses of rain through the day, some of which heavy. May ease off for a time around the middle of the day.
Cloud on the hills?	Very extensive. Widely persistent fog above 200 to 400m western dales in Yorkshire. Elsewhere, higher cloud base, may reach 650m rarely.	Extensive Low cloud will shroud the fells in fog throughout the day.
Chance of cloud free summits?	10%	30%
Sunshine? Air clarity (below cloud)	Little if any sun: mostly dull and misty.	Overcast. Visibility often poor due to rain.
How Cold? (at 700m)	9C Will feel near freezing point directly in the wind.	10C
And in the valleys	Will reach 10 to 12C, coldest western dales in Yorkshire.	Max temperature up to 15C

Planning Outlook**All mountain areas of Britain from Tuesday, 4 November, 2025**

Remaining very unsettled with as a series of deep Atlantic lows, and their associated fronts, continue to cross Britain over the next week to ten days. Frequently windy, with high rainfall, particularly on western mountains (rain at some stage almost daily) and cloud will frequently cover higher areas. Only rarely cold enough for snow higher mountains in Scotland.

Forecast issued at 12:53 on Sunday, 2 November, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
