

Yorkshire Dales & North Pennines

The entire Yorkshire Dales National Park and North Pennines AONB, including the Three Peaks and Cross Fell, plus Howgills, also south to Forest of Bowland.

MWIS Wild Weekend - Ambleside - 25-26 October
Indoor-outdoor weather skills course - see mwis.org.uk/information/day-with-mwis for info & booking

General Summary for Monday, 24 November, 2025

British Mountain Summary:

Based on forecast chart for noon 24 November, 2025

Turning cold from north and extensively windy behind an area of low pressure centred over SE England. Snow and hail showers will affect N & E Scotland, whilst further south patchy rain (sleet highest summits), but total rainfall small.

Headline for Yorkshire Dales & North Pennines

Showers; sometimes frequent upland wind close to gale.

Detailed Forecast for Monday, 24 November, 2025

How windy? (On the summits)	Northerly, 30 and on highest fells 40mph.
Effect of wind on you?	Walking arduous or in places difficult, particularly near precipitation, where in gusty conditions, balance tricky and wind chill significant.
How wet? (Precipitation and its impact)	Showery, particularly N Pennines Occasional showery rain or on highest tops, sleet. Locally the rain constant for an hour or so, particularly northern Pennines.
Cloud on the hills?	Becoming confined to, but may well not clear, higher summits Nearly all fells are likely to clear by about midday, although in morning cloud extensive above 500, later 600m. Gradually most summits clearing but may not clear above 700m all day.
Chance of cloud free summits?	70% by afternoon
Sunshine? Air clarity (below cloud)	Occasional sunshine, mainly more western areas. Visibility very good.
How Cold? (at 700m)	Around 2C - a marginal drop likely through the day Will feel as cold as minus 10C directly in the wind.
And in the valleys	Will reach 6 or 7C early afternoon.

Yorkshire Dales & North Pennines - Looking Ahead

	Tuesday 25 November	Wednesday 26 November
How windy? (On the summits)	Northerly 30mph at first; but easing toward 20mph.	Southwesterly soon 35 to on higher tops 45mph.
Effect of wind on you?	Considerable buffeting and wind chill after dawn, but will become small through afternoon.	Soon extensively difficult walking where exposed with sudden gusts and significant wind chill.
How wet? (Precipitation and its impact)	Precipitation very unlikely Risk of a few brief showers, probably confined to more eastern dales..	Rain on and off, mainly afternoon Rain and drizzle gradually spreading east, most likely later morning or middle of day. Total rain widely small, but most persistent more western areas between Tebay and Ingleton.
Cloud on the hills?	Mostly or all clearing Patches covering highest slopes at times, but most summits extensively cloud free.	Fells filling in with fog; lowest base west Some higher slopes probably initially cloud free. Will deteriorate, across western fells between Tebay and Ingleton, cloud widely below 300-450m. Elsewhere, slowly filling in across higher slopes, typically 500 to 700m afternoon.
Chance of cloud free summits?	80%	Dropping to 20%
Sunshine? Air clarity (below cloud)	Bright sunshine. Excellent visibility.	Glimpses of weak sunshine lower slopes Northern Pennines and eastern dales in Yorkshire. Becoming extensively dull and misty as visibility drops in rain.
How Cold? (at 700m)	1C	2C rising to 5C. Will feel as cold as minus 10C directly in the wind.
And in the valleys	Will rise to 4 to 6C early afternoon. Frost many valleys morning.	Widespread frost at first, as low as minus 3C; but rising through daylight to around 5 or 6C.

Planning Outlook**All mountain areas of Britain from Tuesday, 25 November, 2025**

As a series of deep Atlantic lows pass north of or across Britain, rainfall be become high particularly on western mountains together with frequent upland gales and low cloud. In Scotland, temperatures on the Munros will sometimes be below freezing point, but fresh snow transient, whereas elsewhere, snow rare, if any.

Forecast issued at 14:00 on Sunday, 23 November, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
