General Summary for Wednesday, 3 December, 2025

British Mountain Summary:

Based on forecast chart for noon 3 December, 2025

Widely breezy, strongest northern England and Scotland, early gales over high Munros; easing but staying blustery northwest Scotland. Showery rain onto west coast slopes down to Wales (snow on high terrain) most of the day, some reaching further east afternoon. Greatest chance of dry weather south Pennines.

Headline for Yorkshire Dales & North Pennines

Blustery over the tops; risk showery rain afternoon

Detailed Forecast for Wednesday, 3 December, 2025

How windy? (On the summits) Effect of wind on you?	Southwesterly 25-30mph from dawn, rising slightly for a time around midday with gusts reaching 35mph or higher over highest tops. Speeds settle near 30mph most of afternoon. Comfort of walking affected; more strenuous in exposure with buffeting gusts, notably for a few hours around midday. Notably chilly.
How wet? (Precipitation and its impact)	Risk of afternoon showery rain A few sparse showers near Tebay in the morning. Afternoon brings a greater risk of showery rain from the west, though several fells may remain dry.
Cloud on the hills? Chance of cloud free summits?	Mostly high tops, variable lower banks Often capping the Three Peaks northward to Cross Fell; a chance of low fog patches on middle slopes and in the dales early. Some variability, odd breaks to tops but also lower banks around rain, greatest risk low cloud afternoon. 50%
Sunshine? Air clarity (below cloud)	Frequent busts of sunshine for periods, mostly early, more often cloudy afternoon. Very good visibility.
How Cold? (at 700m) And in the valleys	2C early, becoming 3C. Feeling like -8C in the wind. 2C at dawn, though locally cooler towards Teesdale with chance of a light frost. Rising to 5C.

All mountain areas of Britain from Thursday, 4 December, 2025

Low pressure circulating to the west and north will dominate the weather for the next 7 to 10 days, bringing generally unsettled weather. A brief period of slack pressure on Thursday into Friday will ease winds for a time though patchy rain will linger in several areas. Strong southwesterly winds return over the weekend bringing cloud and rain to many mountains, most persistent on southwestern slopes. Temperatures and freezing level will vary, but staying chilly with highest terrain likely near or below 0C. Several low pressure systems will then pass through next week, bringing frequent periods of cloud, rain, and strong wind, likely gale force on high terrain at times. Occasional windows of dry, brighter weather will occur. Best chance east.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
