## General Summary for Sunday, 28 June, 2026

### British Mountain Summary:

**Based on forecast chart for noon 28 June, 2026**

Strengthening southwesterly winds, reaching gale force over western Scottish mountains, soonest near Skye. Much fresher everywhere, rather chilly on tops in exposure to wind. Some early rain, improving as cloud lifts and breaks, but scattered showers move east across the Highlands into the afternoon.

### Headline for Yorkshire Dales & North Pennines

Breezy. Early patchy rain, cloud lifts to clear hills.

## Detailed Forecast for Sunday, 28 June, 2026

|  |  |
|--|--|
| <b>How windy? (On the summits)</b>             | Southwesterly 20-30mph, sometimes gusting 35mph over the highest tops, particularly around dawn, and again later in the day.   |
| <b>Effect of wind on you?</b>                  | <b>Walking impeded at times on high exposed fells; may be locally fairly small middle of day on lower hills. Feeling fresh.</b>  |
| <b>How wet? (Precipitation and its impact)</b> | <b>Morning rain, becoming largely dry</b><br>Several bands of rain pass west-to-east from before dawn into early-mid morning, brief heavy falls and dry windows. Breaking into scattered light showers middle of day onward, likely just west and amounting to little. |
| <b>Cloud on the hills?</b>                     | <b>Rising above the fells afternoon</b><br>High tops in cloud much of the morning, a few breaks, but also filling in to middle slopes for a time early in day. Into middle of day, lifting to increasingly clear the summits.  |
| <b>Chance of cloud free summits?</b>           | <b>40% rising to 90%</b>   |
| <b>Sunshine? Air clarity (below cloud)</b>     | A few bursts of morning sun, breaking to a patchwork of cloud and sun by middle of day.<br>Visibility becomes excellent.   |
| <b>How Cold? (at 700m)</b>                     | 11 to 13C, warmest Yorks Dales where may rise slightly, but finishing near 10C widely. Feeling like 5C directly in breeze on tops.   |
| <b>And in the valleys</b>                      | 14 or 15C at dawn, rising to 17 or 18C by early afternoon; much fresher than recent days.  |

## Yorkshire Dales &amp; North Pennines - Looking Ahead

|  | Monday 29 June  | Tuesday 30 June   |
|--|---|---|
| <b>How windy? (On the summits)</b><br><b>Effect of wind on you?</b>    | Westerly 20-30mph at dawn, strongest N Pennines tops, easing and finishing near 10-15mph, some variability in direction.<br><b>Blustery in exposure at dawn, momentarily strenuous high N Pennines, easing to small effects by evening.</b>                       | Southerly 15 to 20mph, at times 25mph on higher tops; later may shift southwesterly and trend toward lower speeds.<br><b>Fairly small, but may feel more blustery for periods on higher tops.</b>   |
| <b>How wet?</b><br>(Precipitation and its impact)                      | <b>Spotty rain, few showers, often dry</b><br>A few spots of light rain drift from the west from time to time, amounting to little and more often dry; perhaps more often damp Three Peaks to Tebay. Increased risk of showers for several later afternoon hours. | <b>Frequent or persistent rain, some heavy</b><br>Areas of rain and showers throughout the day, periods of constant rain, likely heaviest and most persistent western Dales in morning, but likely increasingly widely; risk of isolated thunder. |
| <b>Cloud on the hills?</b><br><br><b>Chance of cloud free summits?</b> | <b>Little or none</b><br><br>Some patchy cloud on upper terrain around dawn, summits may start covered, but cloud soon lifts and breaks after dawn for cloud-free fells. Small risk an odd cloud patch returning to tops where a shower occurs.<br><br><b>90%</b> | <b>Most persistent western Dales</b><br><br>Cloud banks often capping western tops in Three Peaks area, but filling in more widely on tops in rain, ragged low patches. Breaks for periods northeast Pennines.<br><br><b>40%</b>                  |
| <b>Sunshine?</b><br>Air clarity (below cloud)                          | A patchwork of cloud and sunshine, some variable thin high cloud around. Very good visibility.  | Generally cloudy, a little weak sun mainly morning in east. Visibility often reduced by rain, poor for periods; intermittently very good if dry.  |
| <b>How Cold? (at 700m)</b><br><br><b>And in the valleys</b>            | 8C rising to 13 or 14C.<br><br>10 or 11C at dawn, rising to 17 to 19C afternoon.  | 10C rising to 13C afternoon.<br><br>11C at dawn, rising to 19C afternoon.   |

**Planning Outlook****All mountain areas of Britain from Monday, 29 June, 2026**

A westerly Atlantic pattern dominates the new week: high pressure south and low pressure north will bring alternating periods of rain punctuated by bright sunshine. Wind generally on the strong side with mild to sometimes warm temperatures, though cooler and windier spells at times produce significant wind chill on Scottish tops. Western hill groups from Lakeland northward will see the most cloud and patchy rain, while east and southern areas likely drier and sunnier. This pattern is likely to continue into next weekend.

**Forecast issued at 16:00 on Saturday, 27 June, 2026**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
