## General Summary for Tuesday, 14 July, 2026

### British Mountain Summary:

#### Based on forecast chart for noon 14 July, 2026

Dry with strong sunshine, warmest in west.

Early fog and low cloud over eastern hills retreats toward the North Sea in the morning. Gusty easterlies mainly central Scotland southwards, strongest for Wales.

Extremely dry ground conditions - beware high risk of fire.

### Headline for Yorkshire Dales & North Pennines

Early fog / low cloud east, warm sunshine, gusty wind.

## Detailed Forecast for Tuesday, 14 July, 2026

|                                                   |                                                                                                                                                                                                                                                                              |
|---------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Easterly 15 to 25mph, local gusts 30mph around some upper slopes, strongest speeds not necessarily on summits, gusty particularly western side of Pennines and Yorks Dales in morning, easing a little.                                                                      |
| <b>Effect of wind on you?</b>                     | <b>Breezy over the fells, in places gustiness may start to affect comfortable walking, feeling cooler where exposed.</b>                                                                                                                                                     |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>No rain expected</b>                                                                                                                                                                                                                                                      |
| <b>Cloud on the hills?</b>                        | <b>Low cloud mostly east dispersing</b><br>Banks of low cloud from dawn mostly over northeastern Pennines above 400-500m. Some high tops just above the cloud. Patchier cloud banks roll across hills toward west, here soon dispersing, and widely clearing during morning. |
| <b>Chance of cloud free summits?</b>              | <b>60% rising above 90%</b>                                                                                                                                                                                                                                                  |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | Sun mostly western areas early in the day, and on some highest tops if above fog; breaking through more widely as early fog clears, visibility then very good.<br>High UV, beware sunburn.                                                                                   |
| <b>How Cold? (at 700m)</b>                        | 9 to 13C from dawn, coolest where in cloud over hills, rising to 15 to 17C, warmest western areas. Feeling fresher directly in the wind.                                                                                                                                     |
| <b>And in the valleys</b>                         | 11C at dawn, rising to 21 to 25C afternoon, warmest in southwestern dales.                                                                                                                                                                                                   |

## Yorkshire Dales &amp; North Pennines - Looking Ahead

|                                                                                                        | Wednesday 15 July                                                                                                                                                                                                                                                                 | Thursday 16 July                                                                                                                                                                                                                                                                                                  |

## Planning Outlook

## All mountain areas of Britain from Wednesday, 15 July, 2026

Staying broadly fine likely through the weekend into early next week at least - dry with pleasantly warm temperatures and often plenty of sunshine. Some coastal fog rolling inland overnight for misty dawns in places this week.

Valley temperatures rising to 25C or above, typically warmer in Wales and Peak District. Gusty easterly winds for England and Wales. An ongoing very high risk of fire with extremely dry ground conditions. Into the weekend, northerly breezes develop more widely, a cooling trend for a time, particularly Scotland where summit temperatures likely dip back below 10C; some cloud may be drawn onto northern mountains at times, small chance of isolated showers.

## Forecast issued at 16:00 on Monday, 13 July, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
