General Summary for Thursday, 5 November, 2026

British Mountain Summary:
Based on forecast chart for noon 5 November, 2026

Extensive fog due to low cloud and patches of drizzle, but dry most western mountains where cloud base highest. Little wind N Scotland, but from near the central belt of Scotland southwards, blustery higher slopes, and in places very gusty west of major ridges.

Headline for Yorkshire Dales & North Pennines

Gusty wind. Cloudy, occasional drizzly rain.

Detailed Forecast for Thursday, 5 November, 2026

How windy? (On the summits)	Easterly 25 to above about 600m 30 or 35mph, although sometimes 45mph. Very gusty some lower slopes.
Effect of wind on you?	**Will impact ease of walking: in places balance a struggle in gusty wind (including some lower slopes west of major ridges). Considerable wind chill.**
How wet? (Precipitation and its impact)	**Patches of drizzly rain, particularly more eastern slopes** Patches of drizzly rain or showers, sometimes the rain frequent over an hour or so - although total rainfall small, particularly on more western hills.
Cloud on the hills?	**Very extensive - highest cloud base toward west** Persistent fog above 200 to 350m, but on western side of the Pennines cloud base in the range 400 to 650m.
Chance of cloud free summits?	**30%**
Sunshine? Air clarity (below cloud)	Extensively cloudy or dull. Visibility mostly very good, but misty where drizzly.
How Cold? (at 700m)	5C. In the wind will feel as cold as minus 4C.
And in the valleys	9 or 10C

Yorkshire Dales & North Pennines - Looking Ahead

	Friday 6 November	Saturday 7 November
How windy? (On the summits)	Easterly, 20mph or in morning perhaps 25mph some higher areas. Will tend to ease through day.	East or northeasterly 10 or 15mph.
Effect of wind on you?	**Fairly small though locally gusty some western slopes (not necessarily confined to higher slopes). Notable wind chill.**	**Negligible**
How wet? (Precipitation and its impact)	**Pockets of rain.** Damp weather with pockets of light or very light rain will come and go particularly above more eastern dales.	**Patches of drizzly rain** Total rainfall small; nevertheless, drizzly rain may fall for an hour or two or on some eastern slopes on and off all day.
Cloud on the hills?	**Extensive, particularly more eastern hills** Broadly, cloud base will rise westwards and through the day. Particularly in rain, pockets of or extensive cloud lower slopes eastern dales base 300 later 450m. Cloud mostly above 650m western hills.	**Persistent fog.** Low cloud will affect most or all hills, widely below 400m - sometimes forming in or just above valleys.
Chance of cloud free summits?	**40%**	**10%**
Sunshine? Air clarity (below cloud)	Occasional or only rare glimpses of sunshine. The air generally very clear, though misty in rain	Cloudy or dull. Hazy or foggy; widely misty in drizzle.
How Cold? (at 700m)	3C. Will feel as cold as minus 5C directly in wind.	4C
And in the valleys	8 to 10C early afternoon.	7 to 9C.

Planning Outlook

All mountain areas of Britain from Friday, 6 November, 2026

High pressure will continue to be the main influence through the next week, particularly W & NW Highlands where extensively dry and wind often light. However, generally fog and low cloud may well never clear most mountains under the light wind. There will also be patches of drizzly rain, although total rainfall small.

Forecast issued at 12:15 on Wednesday, 4 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
