Yorkshire Dales & North Pennines

The entire Yorkshire Dales National Park and North Pennines AONB, including the Three Peaks and Cross Fell, plus Howgills, also south to Forest of Bowland.

Evening with MWIS - Kendal - Thursday 19th November 2026
Classroom weather workshop supporting Kendal Mountain Search and Rescue Team

General Summary for Monday, 9 November, 2026

British Mountain Summary:
Based on forecast chart for noon 9 November, 2026

Many Scottish mountains sunny, but variable areas of low cloud and low-level fog. Murky conditions more widely Pennines and east Wales. No rainfall generally, but dampness in the air locally. Light wind for most places; increasing easterly breeze for Wales.

Headline for Yorkshire Dales & North Pennines

Variable areas of low cloud and fog from valleys upward.

Detailed Forecast for Monday, 9 November, 2026

How windy? (On the summits) **Effect of wind on you?**	Easterly 10mph, or less early in the day, rising a little to 10-15mph up to dusk, slightly stronger after dark. **Small**
How wet? (Precipitation and its impact)	**No rain expected** Locally feeling damp where in fog.
Cloud on the hills? **Chance of cloud free summits?**	**Varied fog and low cloud** Areas of fog on lower terrain but also some cloud banks likely drifting around the hills, which may persist locally, whilst not far away could see substantial breaks. **40%**
Sunshine? Air clarity (below cloud)	Some areas of sun breaking through, in places above fog. Generally hazy at best most lower terrain, perhaps across the hills widely, but locally very good if above fog.
How Cold? (at 700m) **And in the valleys**	2 or 3C. Patchy frost from dawn. Rising to 7 to 9C by afternoon.

Yorkshire Dales & North Pennines - Looking Ahead

	Tuesday 10 November	Wednesday 11 November
How windy? (On the summits)	Southeasterly 20 to 25mph, may rise a little and become gustier during day.	Easterly 20 to 25mph, some gusts over 30mph possible around major summits.
Effect of wind on you?	**Starting to affect comfortable walking over exposed higher terrain and feeling chilly.**	**Starting to affect comfortable walking on exposed terrain, variable gusts to some lower elevations. Marked wind chill.**
How wet? (Precipitation and its impact)	**Rain not expected**	**Largely dry** Chance of an odd light shower mainly eastern Pennines, sleet or a snow flurry on higher tops.
Cloud on the hills?	**Mix of cloud and fog, better west** Various cloud banks, including some fog on lowest terrain. A deck of cloud may drift onto the eastern side of the Pennines more widely, breaking westwards. Some slopes may emerge between cloud layers.	**Variable low cloud, breaks west** Banks of cloud rolling over higher slopes, most persistent toward the east, but breaking westwards, above some tops.
Chance of cloud free summits?	**40%**	**40%**
Sunshine? Air clarity (below cloud)	Sun fairly weak through high cloud, whilst eastern areas more likely cloudy, hazy or misty.	Some sun mainly western areas, but weak due to a veil of high cloud, which may cover the sky further south. Visibility good out of cloud.
How Cold? (at 700m)	4C. Feeling nearer -5C directly in the wind.	1 to 3C, coldest North Pennines. Feeling like -5 to -8C directly in the stronger wind.
And in the valleys	Slight frost likely in sheltered valleys early morning. Rising to 7 to 9C afternoon.	Frost pockets in sheltered valleys in the morning, mainly in west. Otherwise 5 to 8C, small variation night and day.

Planning Outlook

All mountain areas of Britain from Tuesday, 10 November, 2026

Generally dry much of the week ahead in Scotland. Some variable cloud and fog early in the week. A gusty easterly wind for England & Wales and rain pushes into Wales on Tuesday, reaching the south Pennines with time, persisting into Wednesday in these areas, but very little extending further north. Into the second half of the week, a switch to a colder northerly flow will likely drop the freezing level to 800 m increasingly widely for Thursday-Friday, plus frost on low ground. Some snow showers on northern Scottish mountains, but largely dry weather elsewhere. During next weekend, a shift to a less cold Atlantic influence - a changeable mix likely into the following week.

Forecast issued at 15:00 on Sunday, 8 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
