Yorkshire Dales & North Pennines

The entire Yorkshire Dales National Park and North Pennines AONB, including the Three Peaks and Cross Fell, plus Howgills, also south to Forest of Bowland.

Evening with MWIS - Kendal - Thursday 19th November 2026
Classroom weather workshop supporting Kendal Mountain Search and Rescue Team

General Summary for Friday, 13 November, 2026

British Mountain Summary:
Based on forecast chart for noon 13 November, 2026

Under high pressure most mountain areas fine with sunshine. However, progressively north across Scotland, increasing strong westerly wind will bring snow showers to mainly the NW Highlands and low cloud across western mountains. Much terrain frozen - but freezing level rising through day.

Headline for Yorkshire Dales & North Pennines

Most terrain frozen. Bright sunshine.

Detailed Forecast for Friday, 13 November, 2026

How windy? (On the summits)	Northwest backing westerly 15 to 20mph
Effect of wind on you?	**Small.**
How wet? (Precipitation and its impact)	**Precipitation not expected**
Cloud on the hills?	**Very little if any**
Chance of cloud free summits?	**Almost certain**
Sunshine? Air clarity (below cloud)	Bright sunshine. Visibility excellent or superb.
How Cold? (at 700m)	-1C rising to 1C.
And in the valleys	Terrain nearly all frozen morning, but then a thaw, with valley temperatures drifting up to 4 to perhaps 6C.

Yorkshire Dales & North Pennines - Looking Ahead

	Saturday 14 November	Sunday 15 November
How windy? (On the summits)	South or southwesterly between 20 and on highest tops 30mph - perhaps 35mph N Pennines.	Very low confidence near centres of low pressure: Varied direction, possible prolonged lull but anticipate up to 40mph.
Effect of wind on you?	**Mostly fairly small, although notable wind chill and expect the wind to impact ease of walking, particularly above 500 or 600m.**	**Sometimes small, but zones where wind chill significant and walking difficult - these challenging conditions could set in abruptly.**
How wet? (Precipitation and its impact)	**Showers, sleet higher fells** Western areas south of Tebay: risk showers - sometimes coming in along narrow lines give precipitation over an hour or so, whilst nearby dry. Sleet higher tops. Elsewhere; precipitation unlikely.	**Intermittent rain** Areas of rain will circulate within general low pressure.
Cloud on the hills?	**Many western summits foggy.** Western areas south of Tebay: Cloud base typically 450 to 600m. Elsewhere: patches of cloud on higher slopes, but at least intermittently clearing.	**Fog very likely across the mountains all day** Fog in some areas from lower slopes up, and few breaks above 600m.
Chance of cloud free summits?	**50%**	**30%**
Sunshine? Air clarity (below cloud)	Patches of sunshine, most cloudy western dales south of Tebay, where also hazy. Elsewhere very good visibility.	Sunshine rare if any. Regions of very poor visibility; sometimes very good.
How Cold? (at 700m)	0 rising to 1C. Will feel as cold as minus 8C directly in the wind.	2 to 4C, may drop late in day
And in the valleys	Widely frosty morning; by early afternoon the temperature between 5 and 8C.	Around 6C.

Planning Outlook

All mountain areas of Britain from Saturday, 14 November, 2026

Pressure will fall over the weekend: a little rain for some western mountains on Saturday, but more widespread rain (snow higher areas Scottish Highlands) on Sunday - albeit the detail for Sunday is unusually uncertain (for a 3 day forecast). Cold often dry conditions will return on Monday, but beyond extensive rain (sometimes snow higher areas) and strong winds probable, although presently Scotland, particularly the Highlands may have only snow showers in the cold air.

Forecast issued at 7:39 on Friday, 13 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
