General Summary for Monday, 30 November, 2026

British Mountain Summary:
Based on forecast chart for noon 30 November, 2026

Storm-force winds on high mountains, plus powerful gusts to lower heights. Sustained heavy rain for western areas, all day in Scotland, setting in increasingly for England & Wales; less rain easternmost hills. Rapid thaw of previous snow. Flooding expected.

Headline for Eryri / Snowdonia National Park

Severe gales on mountains; rain sets in heavier.

Detailed Forecast for Monday, 30 November, 2026

How windy? (On the summits)	Southwesterly 50 to 70mph, tending to increase during the day, soonest Snowdon group, reaching 80mph at least in gusts on highest tops; marked rise of speed with height, some powerful gusts lower down.
Effect of wind on you?	**Increasingly severe conditions on high terrain, any mobility very difficult, gusts could blow you over, also in passes and downslope; becoming challenging even on some lower hills with significant wind chill.**
How wet? (Precipitation and its impact)	**Rain developing heavier** Patchy light rain and drizzle from dawn mostly in west, becoming steadier rain with time, setting in for increasingly heavier falls over western hills, ongoing into evening. Very wet underfoot, streams in spate.
Cloud on the hills?	**Increasingly extensive** Varied cloud banks at first, but soon shrouding the hills widely above 600m, or lower at times near to west coast. Higher breaks occasionally north and east groups.
Chance of cloud free summits?	**10%**
Sunshine? Air clarity (below cloud)	Overcast and becoming murky. Hazy at best, visibility increasingly mostly poor due to rain.
How Cold? (at 900m)	Rising from before dawn up to 6C, tending to lift slightly further into evening. Feeling like -5 to -10C in the wind.
Freezing Level	Well above freezing to highest summits.

Eryri / Snowdonia National Park - Looking Ahead

	Tuesday 1 December	Wednesday 2 December
How windy? (On the summits)	Southwesterly 50 to 70mph all day; marked increase of speed with height, powerful gusts around high passes.	North to northwesterly 20 to 30mph.
Effect of wind on you?	**Severe conditions all daylight over higher tops, challenging walking and sudden gusts on some lower slopes.**	**Breezy over the hills, starting to affect ease of walking in exposure; considerable wind chill.**
How wet? (Precipitation and its impact)	**Constant rain, heavy west** Rain likely to continue from overnight into the daytime, sustained heavy falls expected, particularly western areas; may only start to fade well into night. Streams in spate, expect flooding.	**Early rain clears** Remnants of previous rain possibly continue with some heavier falls around dawn, but likely clearing away southwards. Very wet underfoot, flooding likely.
Cloud on the hills?	**Extensive** Blanket low cloud across the hills all day, to lower slopes near west coast; some higher breaks near/north of Ogwen valley.	**Patches on some tops** Patchy cloud grazing higher tops in west and north, but often above lifting many tops elsewhere by mid-morning; may clear more widely.
Chance of cloud free summits?	**Below 10%**	**70%**
Sunshine? Air clarity (below cloud)	Overcast and dull, poor visibility widely, locally better northeast areas.	Any sun weak due to a veil of high cloud, may break through with time. Visibility becoming very good.
How Cold? (at 900m)	8C all day and after dark, then likely to lower quickly onward into night. Wind chill feeling near -5C.	1 or 2C. Feeling like -7C in the wind.
Freezing Level	Above the summits all day. Then later evening into night, likely to drop to around 1000m.	Just above the highest summits.

Planning Outlook

All mountain areas of Britain from Tuesday, 1 December, 2026

High rainfall totals and a rapid thaw at the start of this week leads to flooding; expect some routes to be impassable. Dropping back sub-zero on Scottish tops by Tuesday into Wednesday, with a showery mix of rain, snow and hail. High pressure then builds later in the week bringing commonly dry conditions over a run of days into the weekend and beyond for some places; temperatures varying, some overnight frost, also fog. A mixed southwesterly may return to Scotland for a time with some rain mainly in the west. Onward into mid-December shows signs of colder weather patterns returning.

Forecast issued at 15:00 on Sunday, 29 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
